1 About This Guide

The Universal Order Connect (UOC) API provides RESTful interface to the UOC application. API's are designed to provide customers with a simple way of interfacing with UOC following standard industry practices.

1.1 Document History

The following table lists the change history of the document to date:

Table 1: Document History

Date	Comments
02/01/2019	Document base-lined
05/02/2019	Universal order and response support
08/01/2019	Combo Order Support
04/24/2020	Response Notifications and Response field list
01/07/2022	Update samples as per Starter Package and Marketplace APIs
03/07/2022	Support for Serviceability/Quote
06/17/2022	Support for Order/Response Document Attachment
02/23/2024	Updated architecture
05/01/2024	Updated titles of sections
11/8/2024	Added Trouble Ticket Seller
11/18/2024	Added sample for TP Informational response for UOC Seller
11/27/2024	Added samples for additional Accept and Reject responses for Trouble Ticket UOC Seller

1.2 Audience

This document is designed for developers with programming experience and a working knowledge of the terms and procedures used to implement RESTful web-services.

1.3 Conventions

The following table lists notational conventions found throughout this document:

Table 2: Conventions

Convention	Description	Example
Courier New font, Constant width	Used within command, code, JSON request/response and file samples. Indicate REST API request/response. Might be emphasized with bold.	<pre>{ "domain" : " example", "username" : "example", "password" : "example" }</pre>
Hypertext link	Indicates a hypertext link that, if clicked, takes you to either an HTML page or a URL. A default browser must be specified.	Click here to view the link.
Cross-reference	Used to indicate a cross-reference that, if clicked, takes you to the indicated location in the document.	See Formatting Text on page 13
Note:	A note symbol provides supporting information that is not explicitly addressed in the accompanying text.	<div style="border: 1px solid black; padding: 5px; background-color: #e6f2ff;"> <p>Note: This symbol indicates supporting information.</p> </div>
Date/Time	The UOC application is housed and maintained on the east coast. As such, the system records and displays dates and times based on the current eastern time, which, in the summer, is defined more specifically as Eastern Daylight Time (EDT) and as Eastern Standard Time (EST) in the winter.	n/a

1.4 Assumptions

The following assumptions were made in the creation of this document:

Users of this document have programming experience with a working knowledge of the terms and procedures used to implement REST web-services and JSON.

Users of this document are connecting to the Neustar's UOC application via the API interface.

1.5 Contacting Neustar

If you need technical assistance, please contact your account manager or technical support using any of the following means:

Registered customers with a username and password can open tickets through Neusupport (<http://neusupport.neustar.com>).

(844) 677-2878, option 1, option 1.

Louisville, KY 40223

2 UOC Overview

2.1 The UOC application

Neustar's Universal Order Connect provides a generic universal interface with focus on customer across various order types that allows customer to order from many Trading Partners. It also provides a flexibility to define and use customer specific limited fields (defined via Product Catalog) per Service thus making it Simplified Operations.

Neustar's UOC defines and adheres to the strict industry guidelines for various services and maintains the interconnection relationships with the Service Providers.

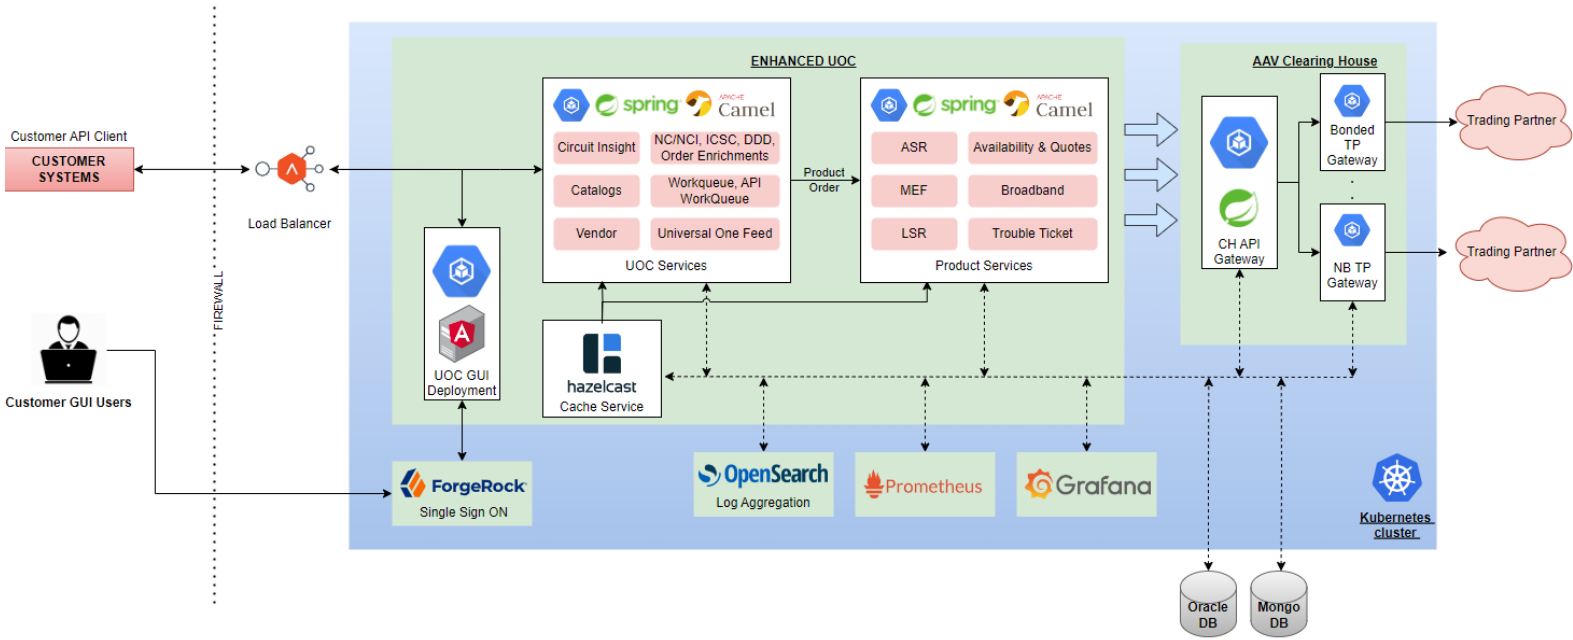

Figure 1: UOC architecture

3 Integration & Model Overview

This chapter provides a description of the REST interface used to communicate with the UOC. Neustar currently uses Representational State Transfer (REST) architectural style in UOC. REST resolves integration problems caused by language and platform dependencies, easily allowing you to integrate with the UOC.

3.1 Integration Overview

2.1.1 Accessing the UOC API

Neustar supports Representational State Transfer (REST) as a means for systems to interact with the UOC (submitting requests and receiving responses). Systems can communicate directly with the UOC via properly formatted JSON messages sent via REST. A message sent into this interface is referred to as a *request message* and the message returned from this interface is referred to as a *response message*.

The UOC is accessed either by the REST Client or the UOC GUI as shown below.

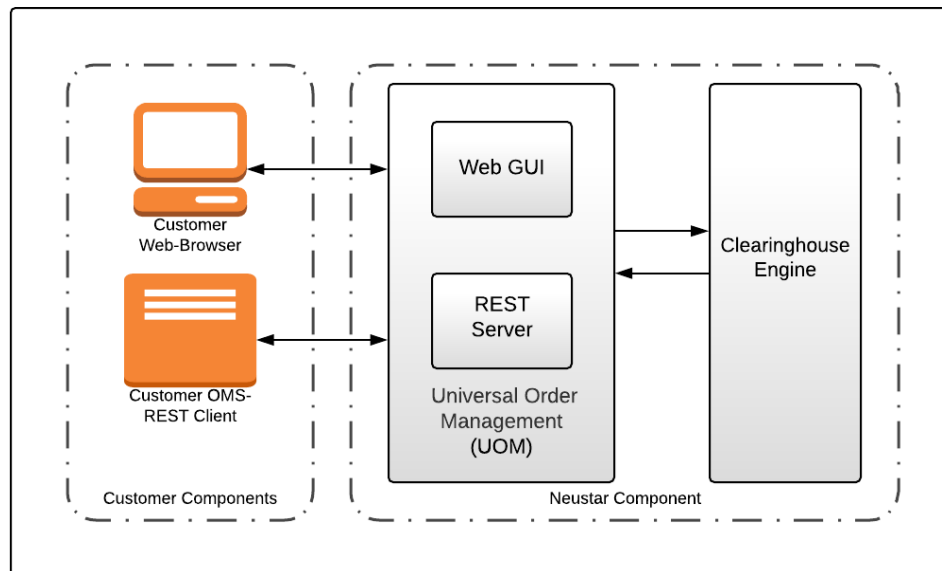

Figure 2: Accessing the UOC

3.1.1 REST Server-Client Interactions

The REST communication consists of the following primary components.

REST client: Invoke the service on server.

REST server: Provides the service and the implementation of the method being called.

Customer interaction with the UOC API is via REST. REST is a lightweight, JSON-based architectural style for exchanging information in a decentralized and distributed environment. REST-compliant web services allow the requesting systems to access and manipulate textual representations of web resources by using a uniform and predefined set of stateless operations.

For additional information and specifications, see: REST Specification:
<https://www.w3.org/2001/sw/wiki/REST>

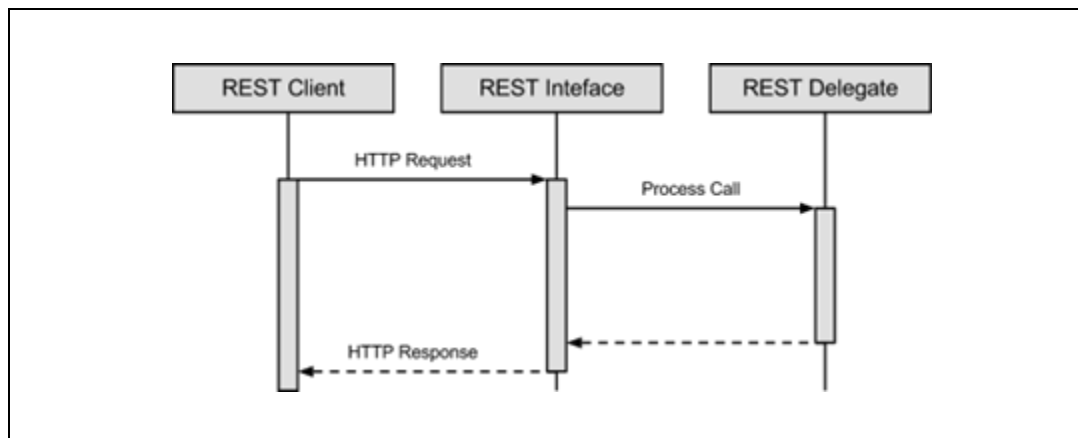

Figure 3: REST Client View

3.1.2 Error Handling

The success/error condition of the API call should be encoded into the HTTP response code, so that a valid success call will return a 200 if it is returning data; 204 otherwise. On an error, the general status code (404-resource not found, 400 for badly formed input, 409 if the caller is trying to create a duplicate resource or invalid input, 500 if there was a server error which the caller can not work around) is encoded in the http response code, but further details are provided in the body:

```
{
  "status" : "failure",      // Status indicating success or failure
  "statusCode" : "1000",
  "errorList" : [{
    "errorCode" : "<code>", //Identifies which error occurred,
    using some id.
    "description" : "Base field is missing" //A string
    providing details on what the error was.
  }]
}
```

3.1.3 HTTP Status Codes for REST calls

Following are the status codes and their meaning in below table. ** is a place holder. For e.g. 200 stands for the request has succeeded.

Table 4: HTTP status codes

Status Code (** - Place holder)	Meaning
1**	Informational Response
2**	Success Response
3**	Redirection Response
4**	Client Error Response
5**	Server Error Response

3.2 UOC Model Overview

Below diagram shows the relationship between Universal order, product order and ASR order.

Universal order can be characterized as follows:

- **Universal order sections:** These sections contain standard ordering fields, which are not tied to any underlying industry specific order. Universal orders will be mapped with Product order through direct mapping or conditional expression language. UOC also supports default values in UOC product catalog.

An Universal order is uniquely identified by UOC Order ID generated by the UOC application and an optional Customer Order ID if provided by the customer

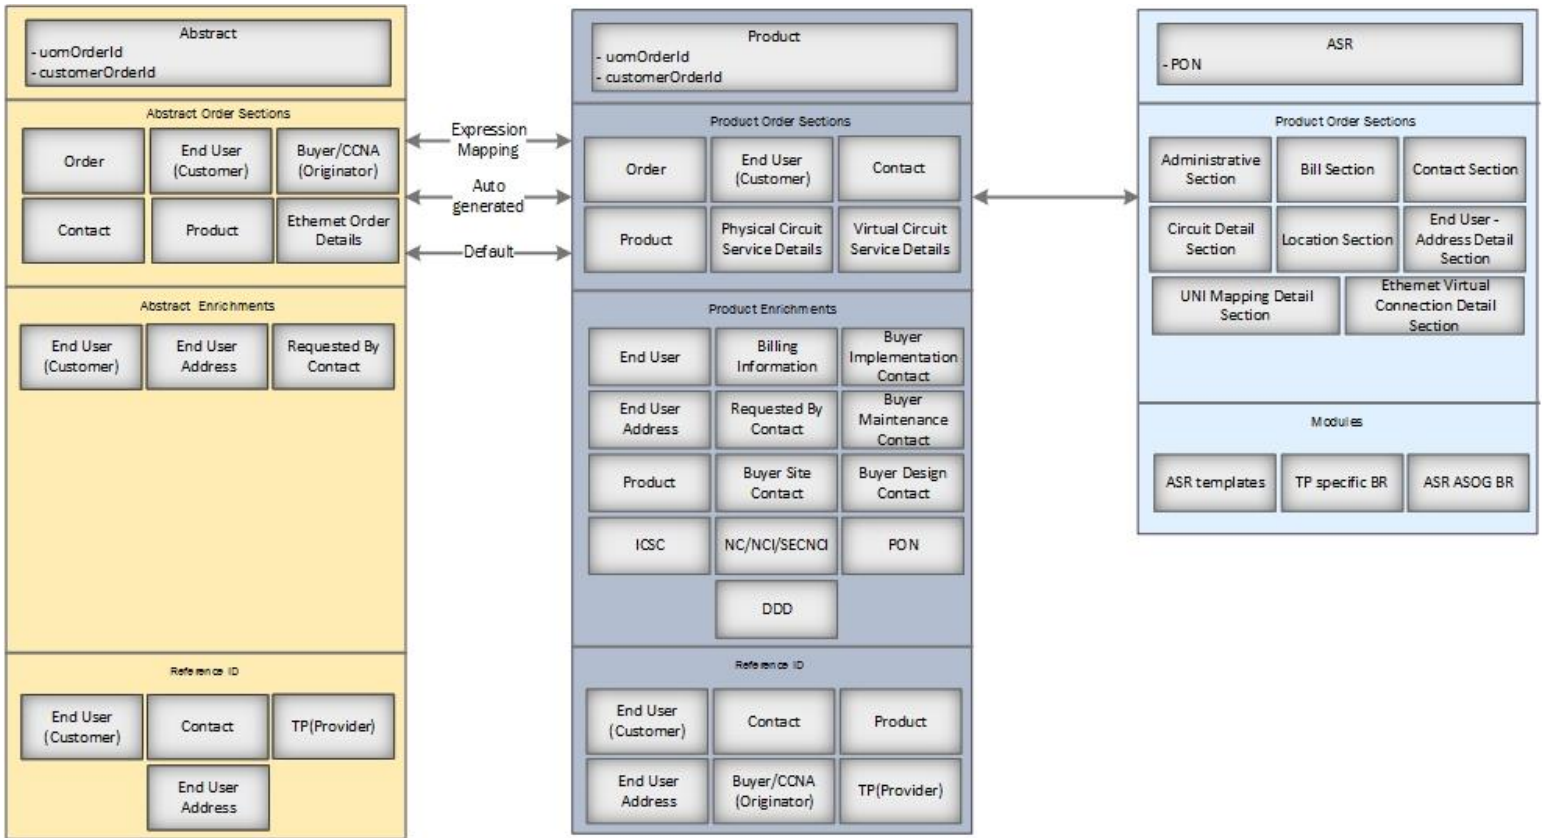

- **Universal Enrichments:** The diagram below shows the various enrichments which can be applied to an Universal Order.

- **Reference IDs:** The diagram below shows the various entities which could be referred by a Reference Id in addition to its name via APIs. The reference IDs will have to be set in UOC application before being referred in the API.

Product order also have similar characteristics, however they are more specifically tied to the particular industry compliant ordering. In addition to enrichments available in universal order for the ASR related Product/Vendor order additional enrichment modules like like NC/NCI/SECNCI, PON, DDD, ICSC etc are also supported.

A Product order is uniquely identified by UOC Order ID generated by the UOC application and an optional Customer Order ID if provided by the customer

A product order is mapped to a Clearing House order. This order will have all fields which are mapped, enriched, auto-populated and generated. An ASR Order is uniquely identified by a PON in the Clearinghouse

Below diagram shows the various entities available as part of enrichments and reference IDs in order generation.

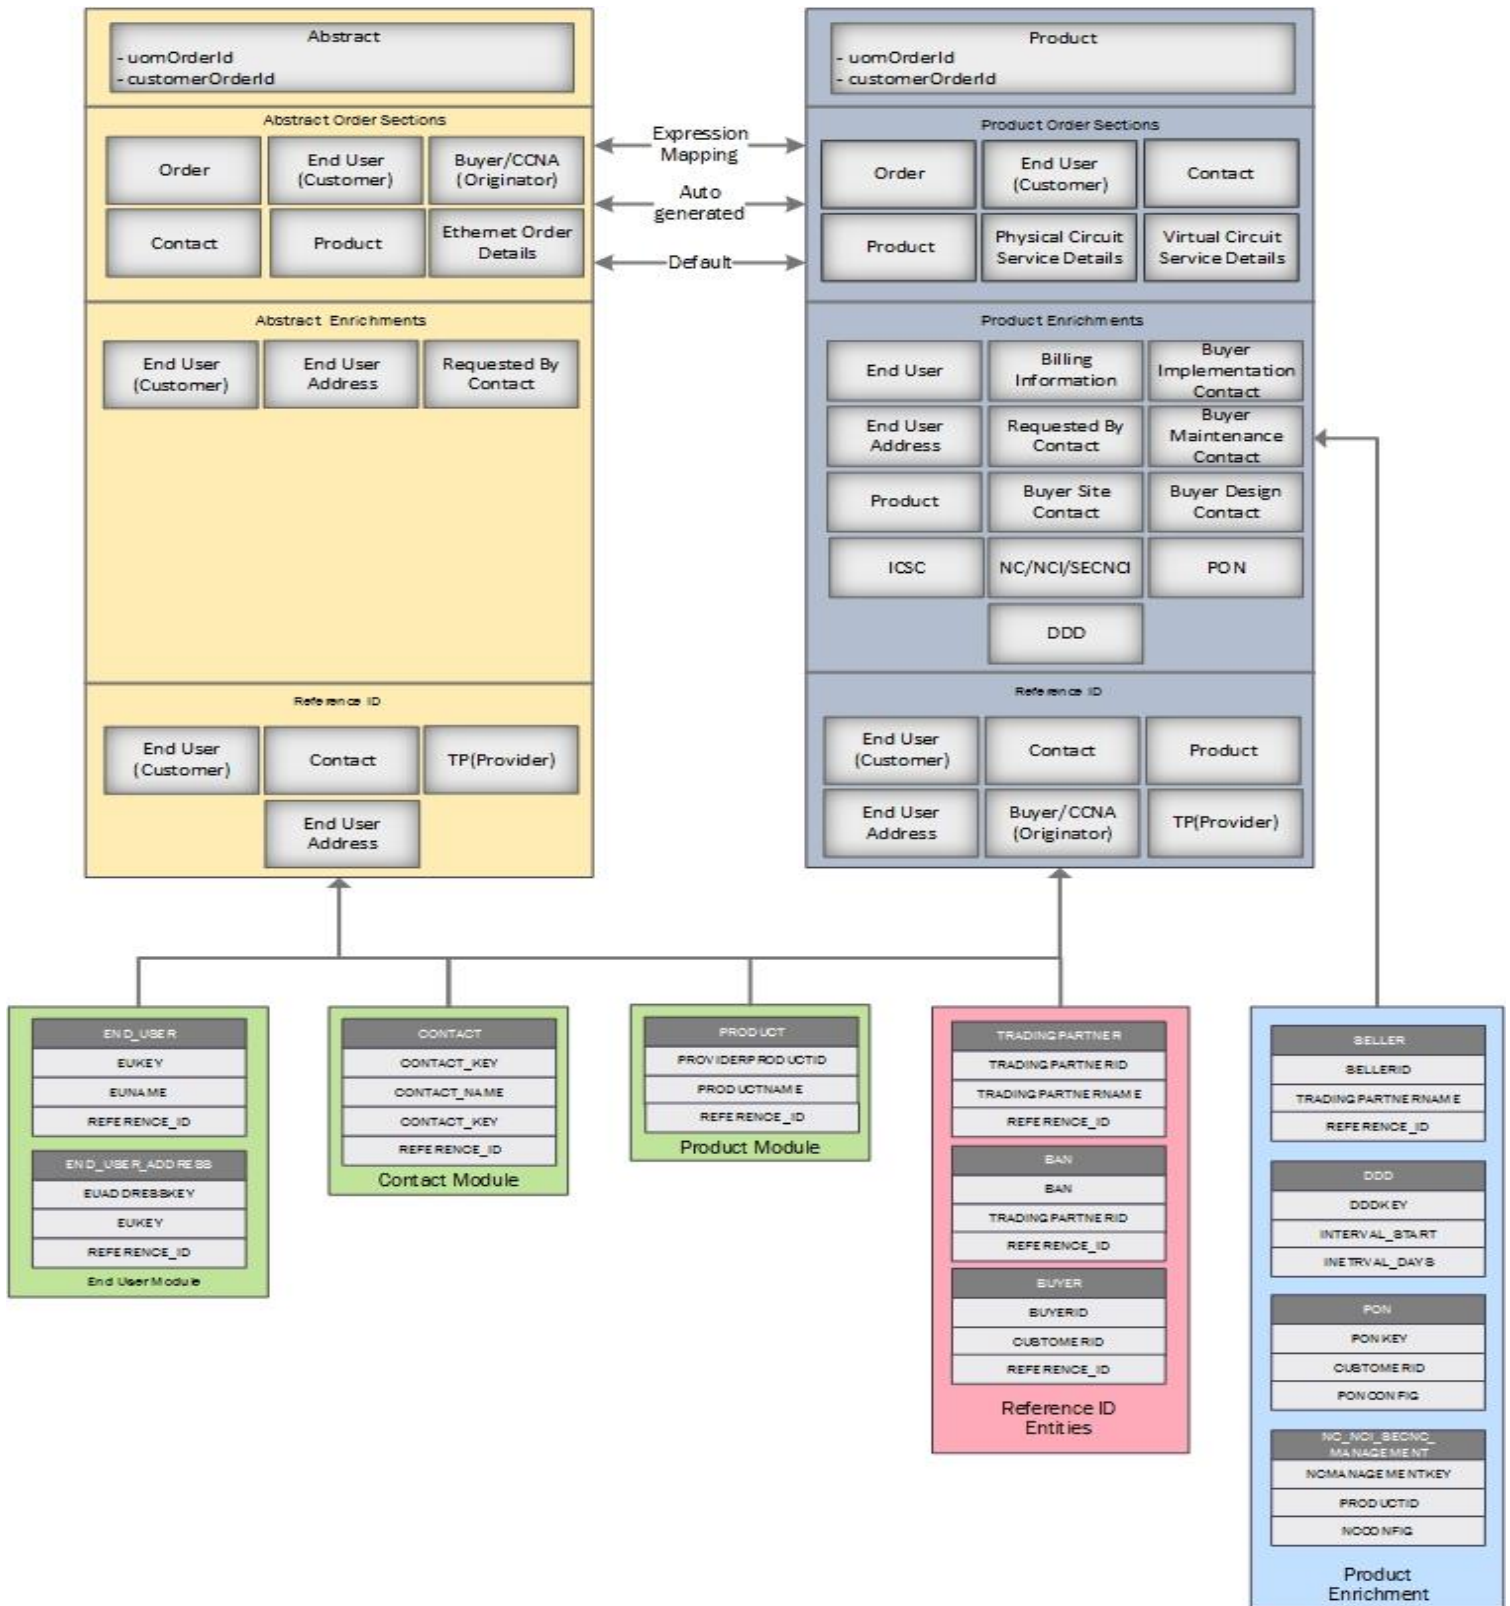

List of enrichments applicable for an Universal order are:

1. End User and End User address
2. Contact
3. Product
4. Trading partner
5. BAN
6. Buyer

List of enrichments applicable for a Product order are:

1. End User and End User address
2. Contact
3. Product
4. Trading partner
5. BAN
6. Buyer
7. Seller

- 8. DDD
- 9. PON
- 10. NC/NCI/SECNCI

4 Creating UOC REST API Messages

4.1 Overview of API – JSON Body

The UOC API is a JavaScript Object Notation (JSON) interface that facilitates the integration with UOC isystem. The API accepts and returns JSON messages. Throughout this document, a JSON message sent through the API from the customer side is called a *request*, and the one returning from the Neustar is termed a *response*.

Messages between customers and UOC are formatted as JSON. A reference source for JSON standards is provided at <https://www.json.org/>

4.2 JSON Restrictions

JSON requests submitted to the UOC must adhere to the following restrictions:

4.2.1 Date

All date fields in the U.S. Standard date format: mm-dd-yyyy

Two Digit Month (01-12)

Two Digit Day (01-31)

Four Digit Year (9999)

4.2.2 Date and Time

All date and time fields in the U.S. Standard format: mm/dd/yyyy hh:mm:ss.

The following JSON illustrates standard date and time field formats:

```
{
    ...
    "createdDate" : "08/14/2018 07:52:46",
    ...
}
```

4.2.3 Telephone Number

Standard format: xxx-xxx-xxxx-xxxx where the first set of digits is the area code, the second set of digits is the exchange, the third set of digits is the number, and the fourth set of digits is the extension. For example, if the telephone number is 510-999-9999-1234, 510 is the area code, 999 is the exchange, 9999 is the number, and 1234 is the extension. The UOC software is designed and tested to work with numbers from the North American Numbering Plan, therefore, the use of country codes is not allowed.

4.3 UOC Transactions

A request is submitted by the client in order to perform some function on the UOC. This section describes the types of requests supported by the UOC API.

4.3.1 Login

The login API would be responsible for authenticating the user and returning the access token back to the caller.

4.3.2 Catalog

Catalogs or Products are the templates that are used to create orders.

Services supported are:

- **Get Catalog**
- **Search Catalog**

4.3.3 Order

Orders are created using the catalogs as templates. This information will be enriched & transformed.

Any field that is part of the catalog and has default value provided for them in the catalog will automatically be added if not provided explicitly.

Services supported are:

- **Create Order**
- **Update Order**
- **Get Order**
- **Search Order**

4.4 Request Header

When a request is submitted to the UOC via the API (Other than Login API), the request header should contain the token which will be used for Authentication and Authorization.

Bearer authentication (also called token authentication) is a HTTP authentication scheme that involves security tokens called bearer tokens. The name "Bearer authentication" can be understood as "give access to the bearer of this token." The bearer token is a cryptic string, usually generated by the server in response to a login request. The client must send this token in the Authorization header when making requests to protected resources:

Authorization: Bearer <token>

5 Ordering Module API Call Flow for a UOC Buyer

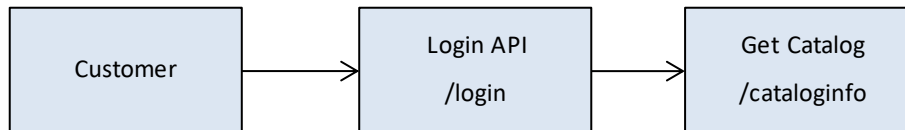

5.1 Login

Use Login API to get access token, this same can be used to in successive calls to as a part of authentication.

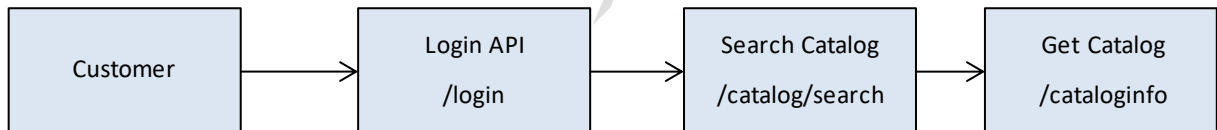

5.2 Get catalog

Get catalog API used to get catalog details, for this call security token is required which can be used form login API call.

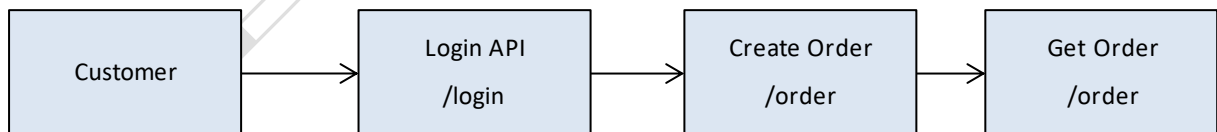

5.3 Search Catalog

Search catalog API used to get all catalogs for particular customers, for this call security token is required which can be used form login API call. The output of this API can be used to get details for particular catalog.

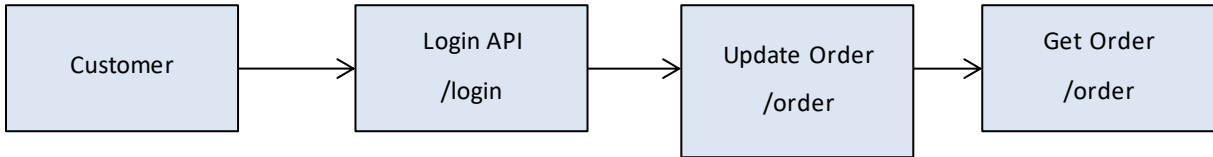

5.4 Create Order

Create order API used to create order, for this call security token is required which can be used form login API call.

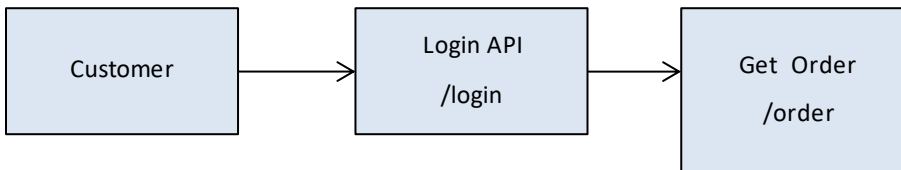

5.5 Update Order

Update Order API used to update order, for this call security token is required which can be used form login API call.

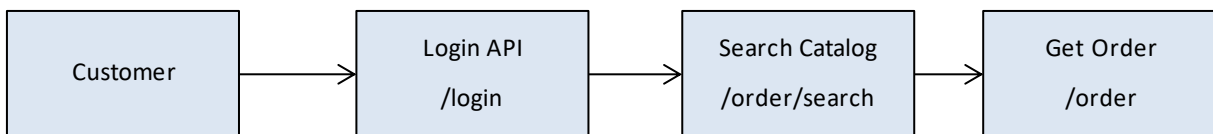

5.6 Get Order

Get order API used to get order details, for this call security token is required which can be used form login API call.

5.7 Search Order

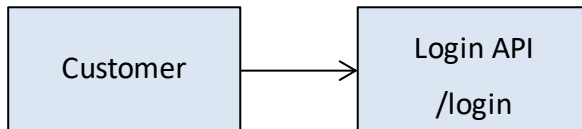

Search Order API used to search orders for particular customer. The output of this API can be used to get details of particular order.

6 Ordering Module API Call Flow for a UOC Seller

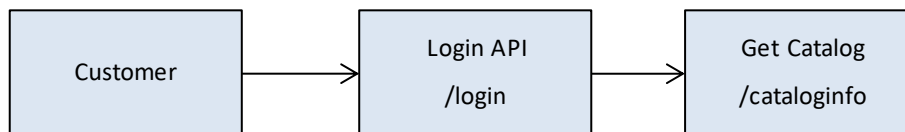

6.1 Login

Use Login API to get access token, this same can be used to in successive calls to as a part of authentication.

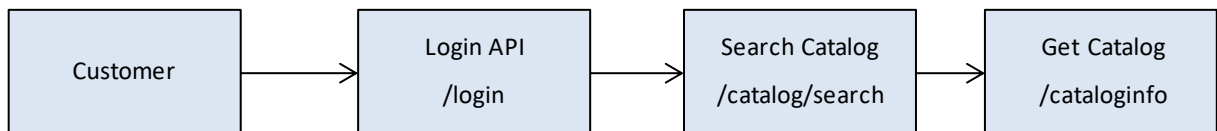

6.2 Get catalog

Get catalog API used to get catalog details, for this call security token is required which can be used form login API call.

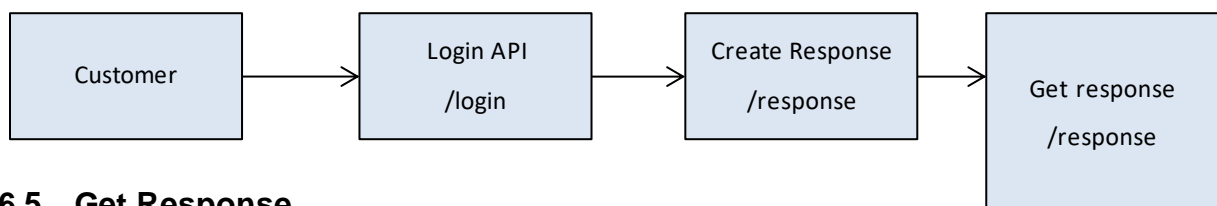

6.3 Search Catalog

Search catalog API used to get all catalogs for particular customers, for this call security token is required which can be used form login API call. The output of this API can be used to get details for particular catalog.

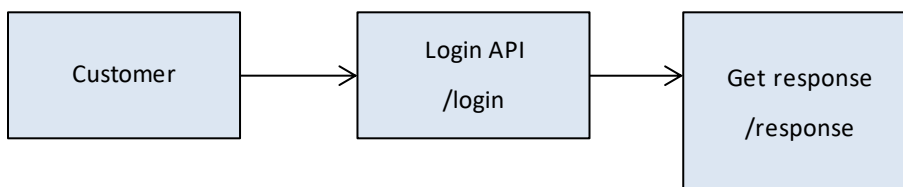

6.4 Create Response

Create order API used to create response, for this call security token is required which can be used form login API call.

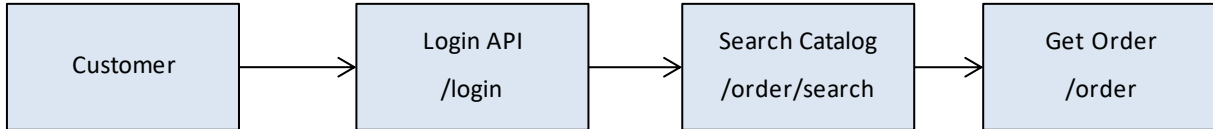

6.5 Get Response

Get order API used to get order details, for this call security token is required which can be used form login API call.

6.6 Search Order

Search Order API used to search orders for particular customer. The output of this API can be used to get details of particular order.

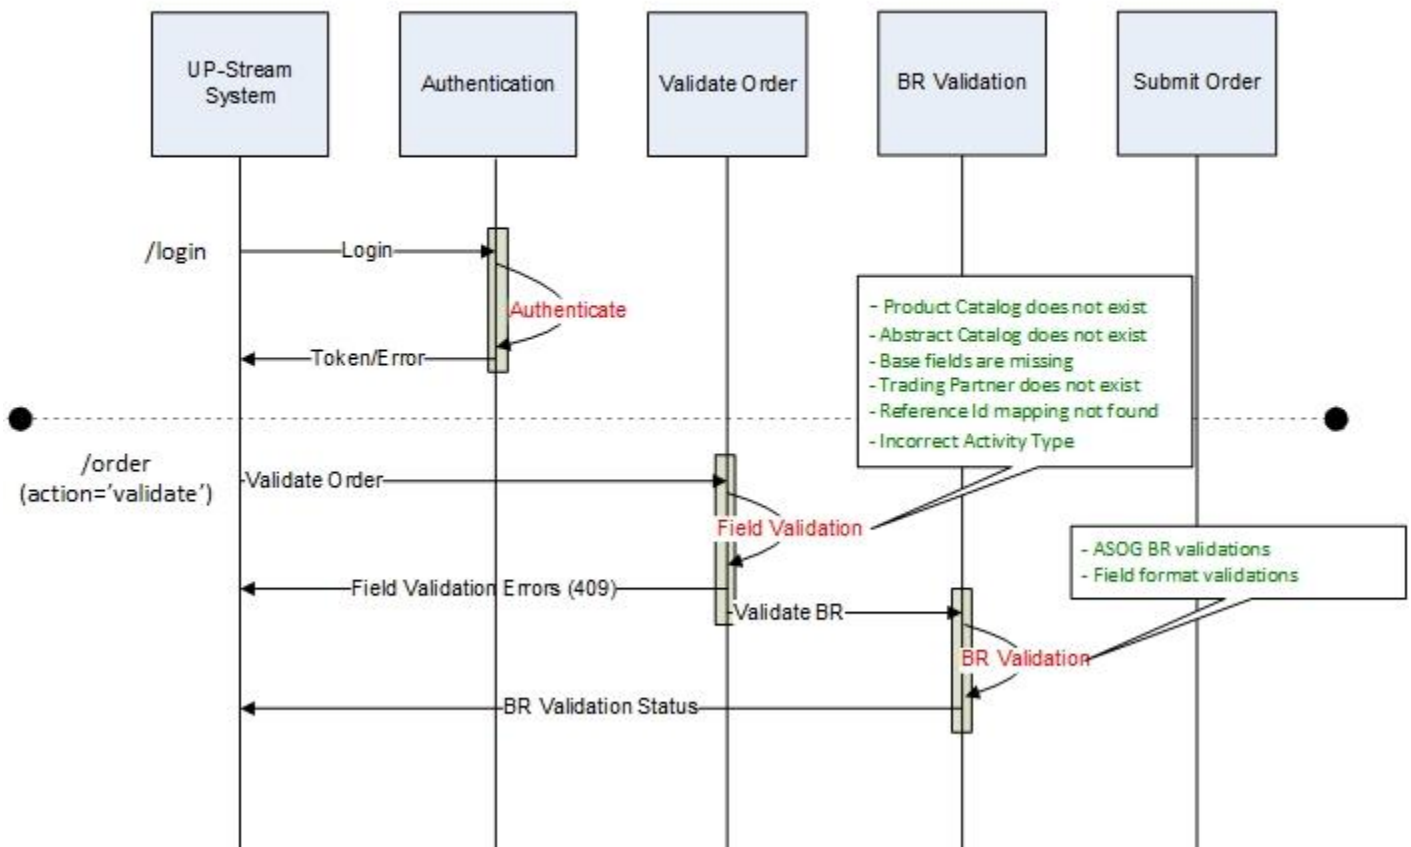

7 Ordering Module Sequence Diagrams for UOC Buyer

7.1 Validate Order

The following sequence diagram provides the sequence of activities performed during a Validate Order action performed by the User

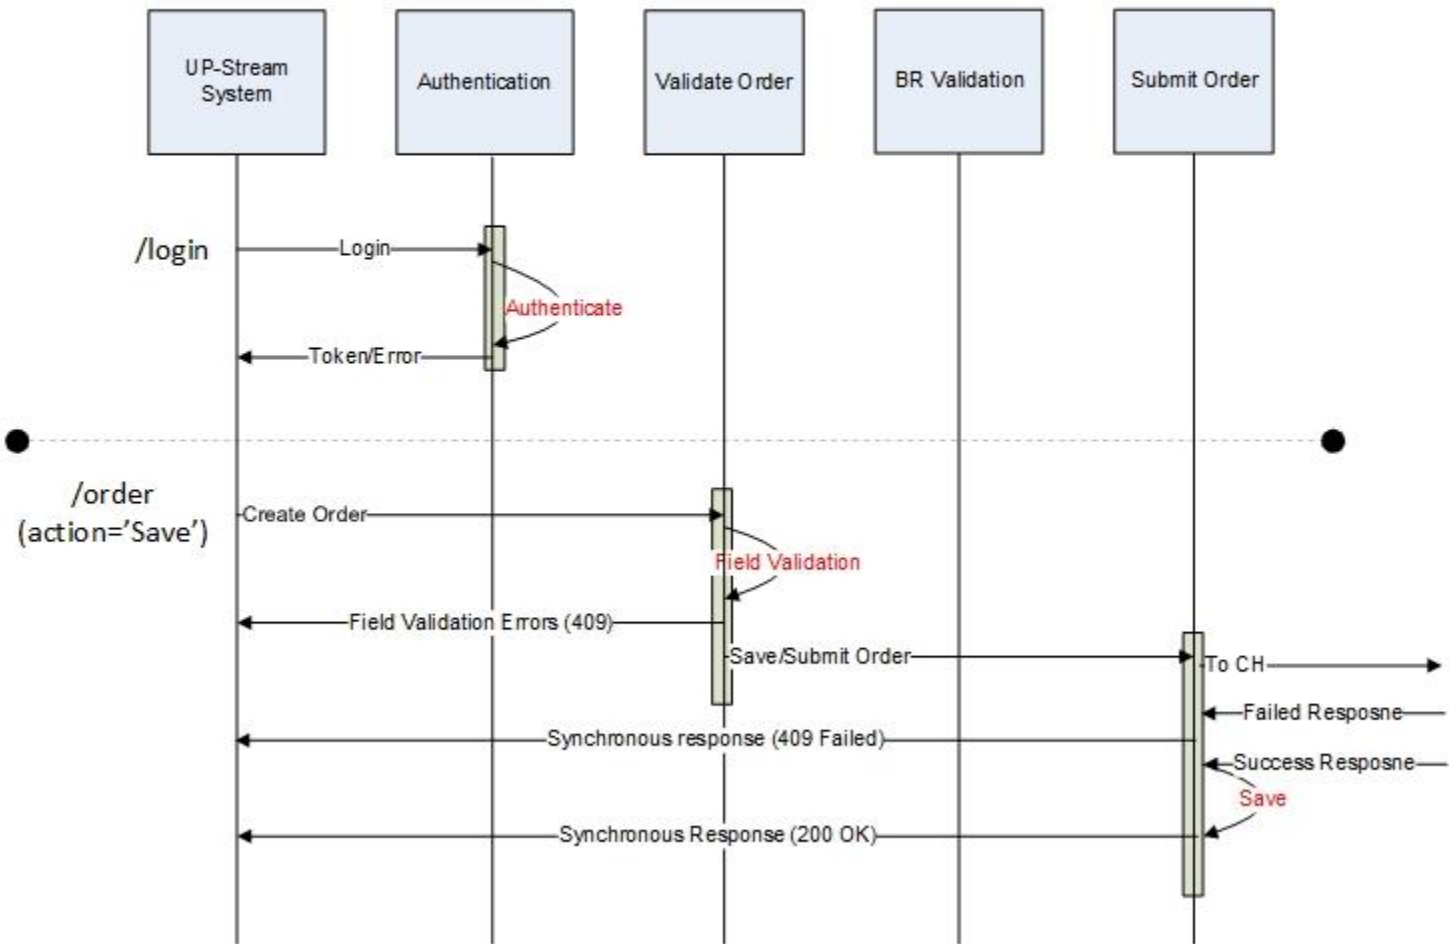

UOM- Validate Order Flow Diagram

7.2 Save Order

The following sequence diagram provides the sequence of activities performed during a Save Order action performed by the User

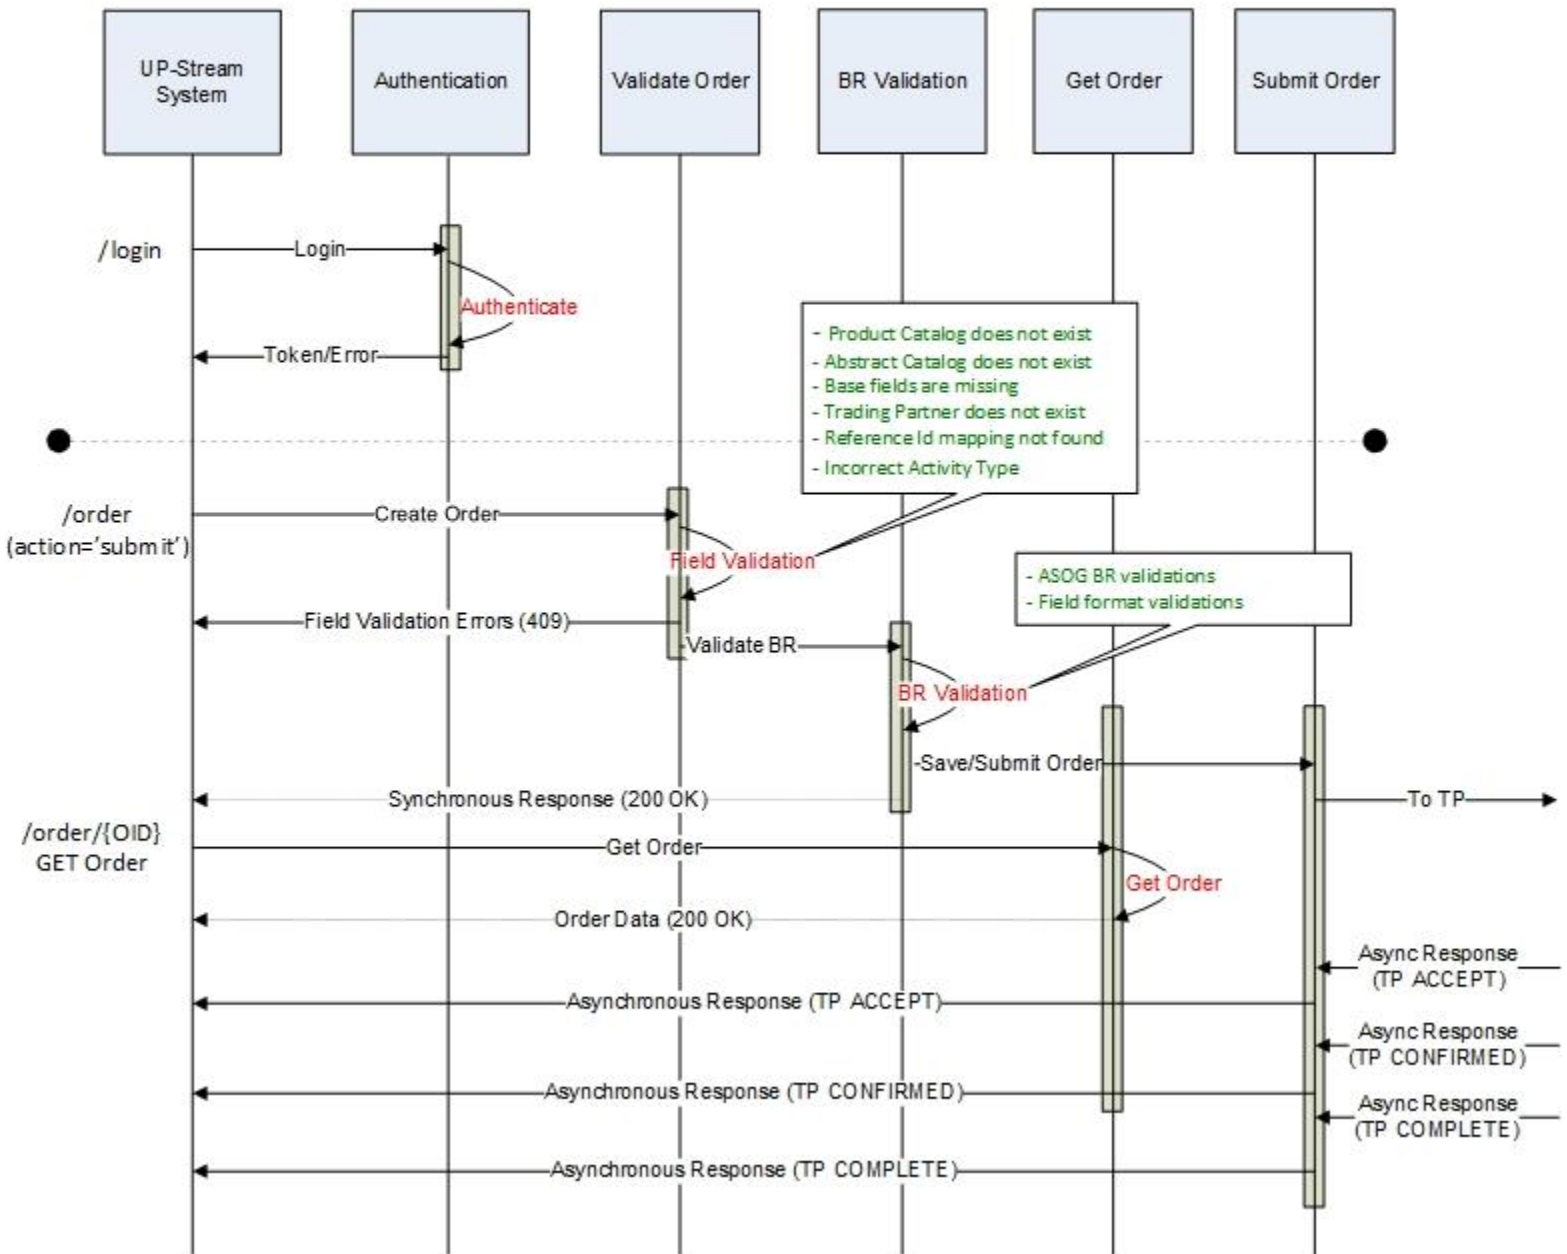

UOM- Save Order Flow Diagram

7.3 Create Order (Sunny Day)

The following sequence diagram provides the sequence of activities performed during a Create Order action performed by the User

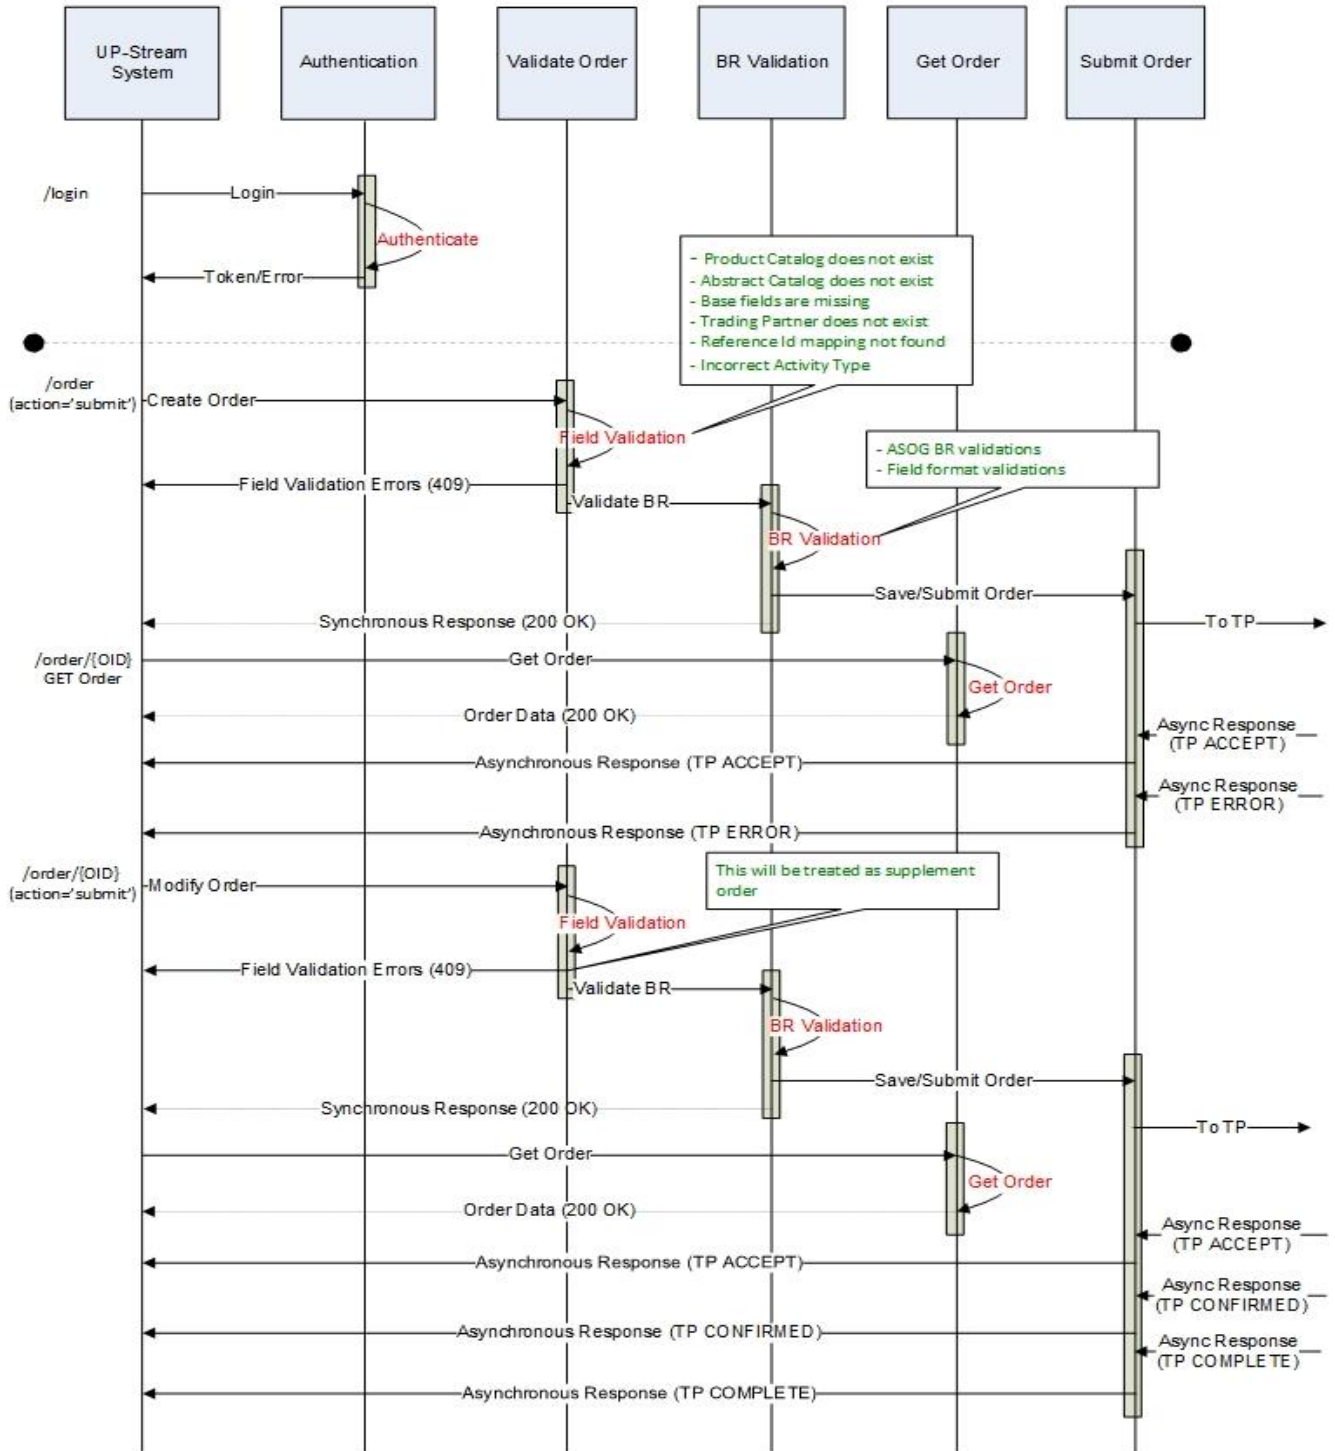

UOM- Submit Order (Sunny Day) Flow Diagram

7.4 Create Order (Rainy Day) – Scenario 1

The following sequence diagram provides the sequence of activities performed during a Create Order action performed by the User. In this scenario when user modifies order which is already sent to TP and we have got the ack for it, this order modification will be treated as supplement order.

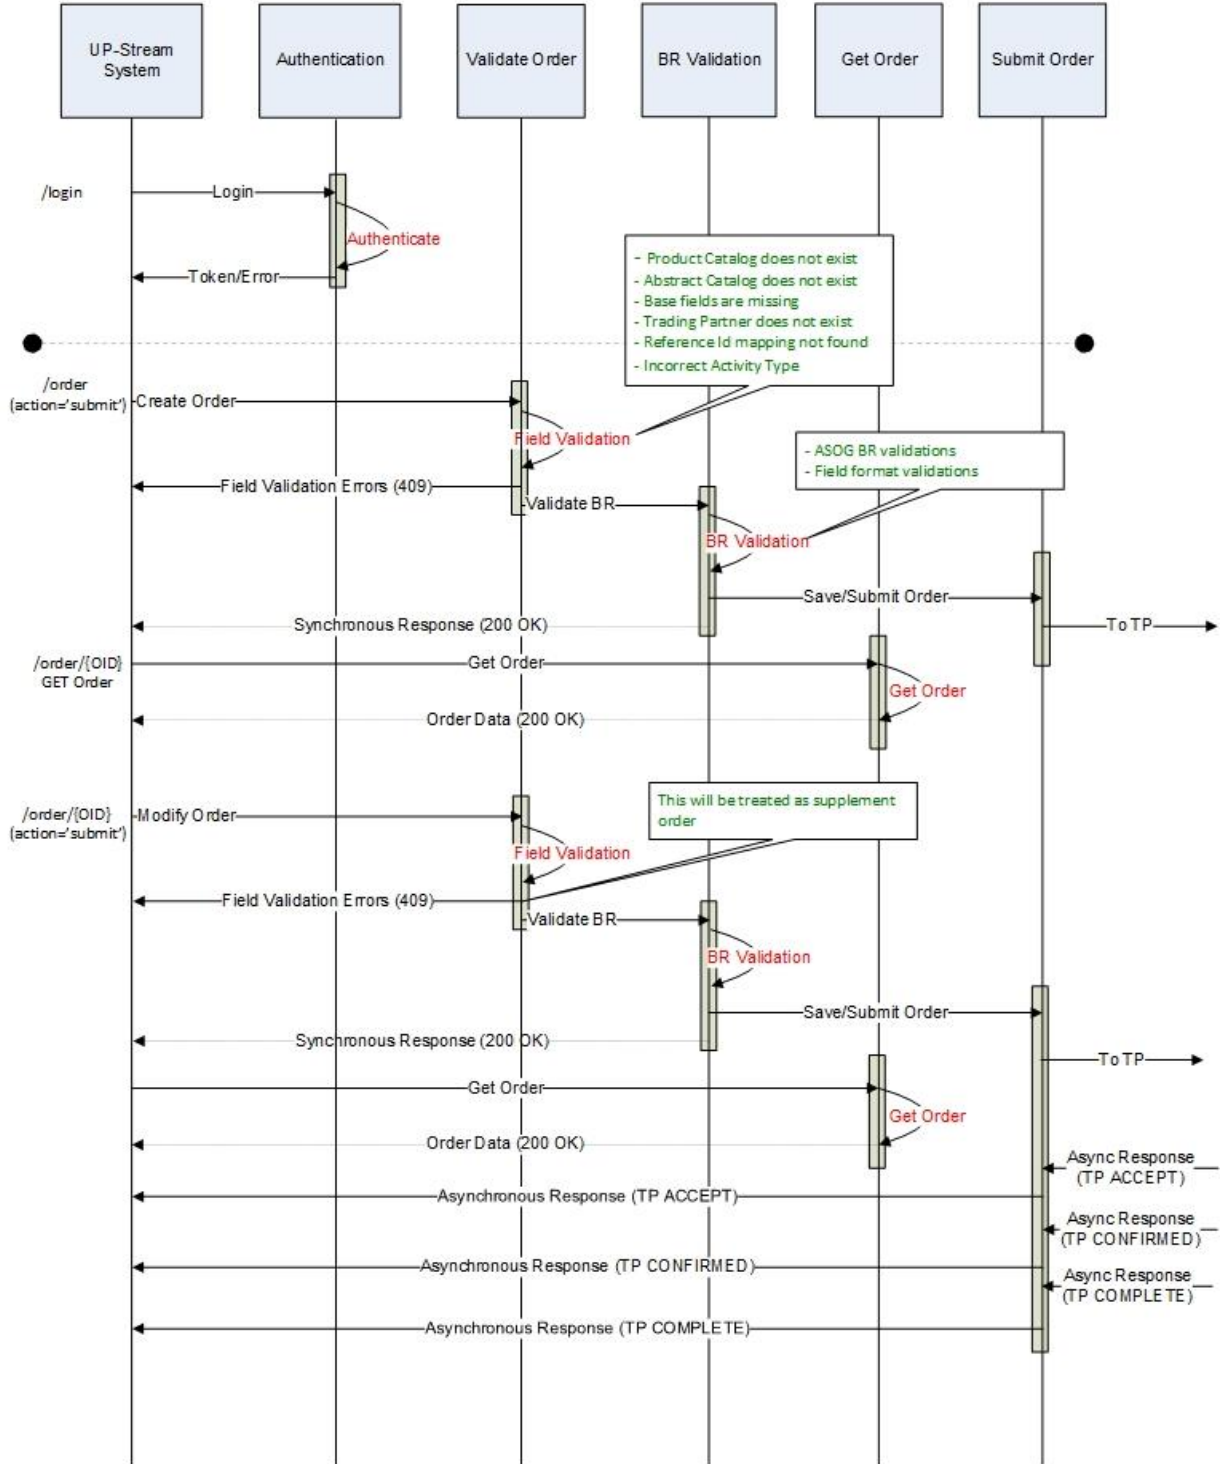

UOM- Submit Order (Rainy Day) Flow Diagram

7.5 Create Order (Rainy Day) – Scenario 2

The following sequence diagram provides the sequence of activities performed during a Create Order action performed by the User. In this scenario when user modifies order which is already sent to TP but we didn't get ack for it, this order modification will be treated as supplement order.

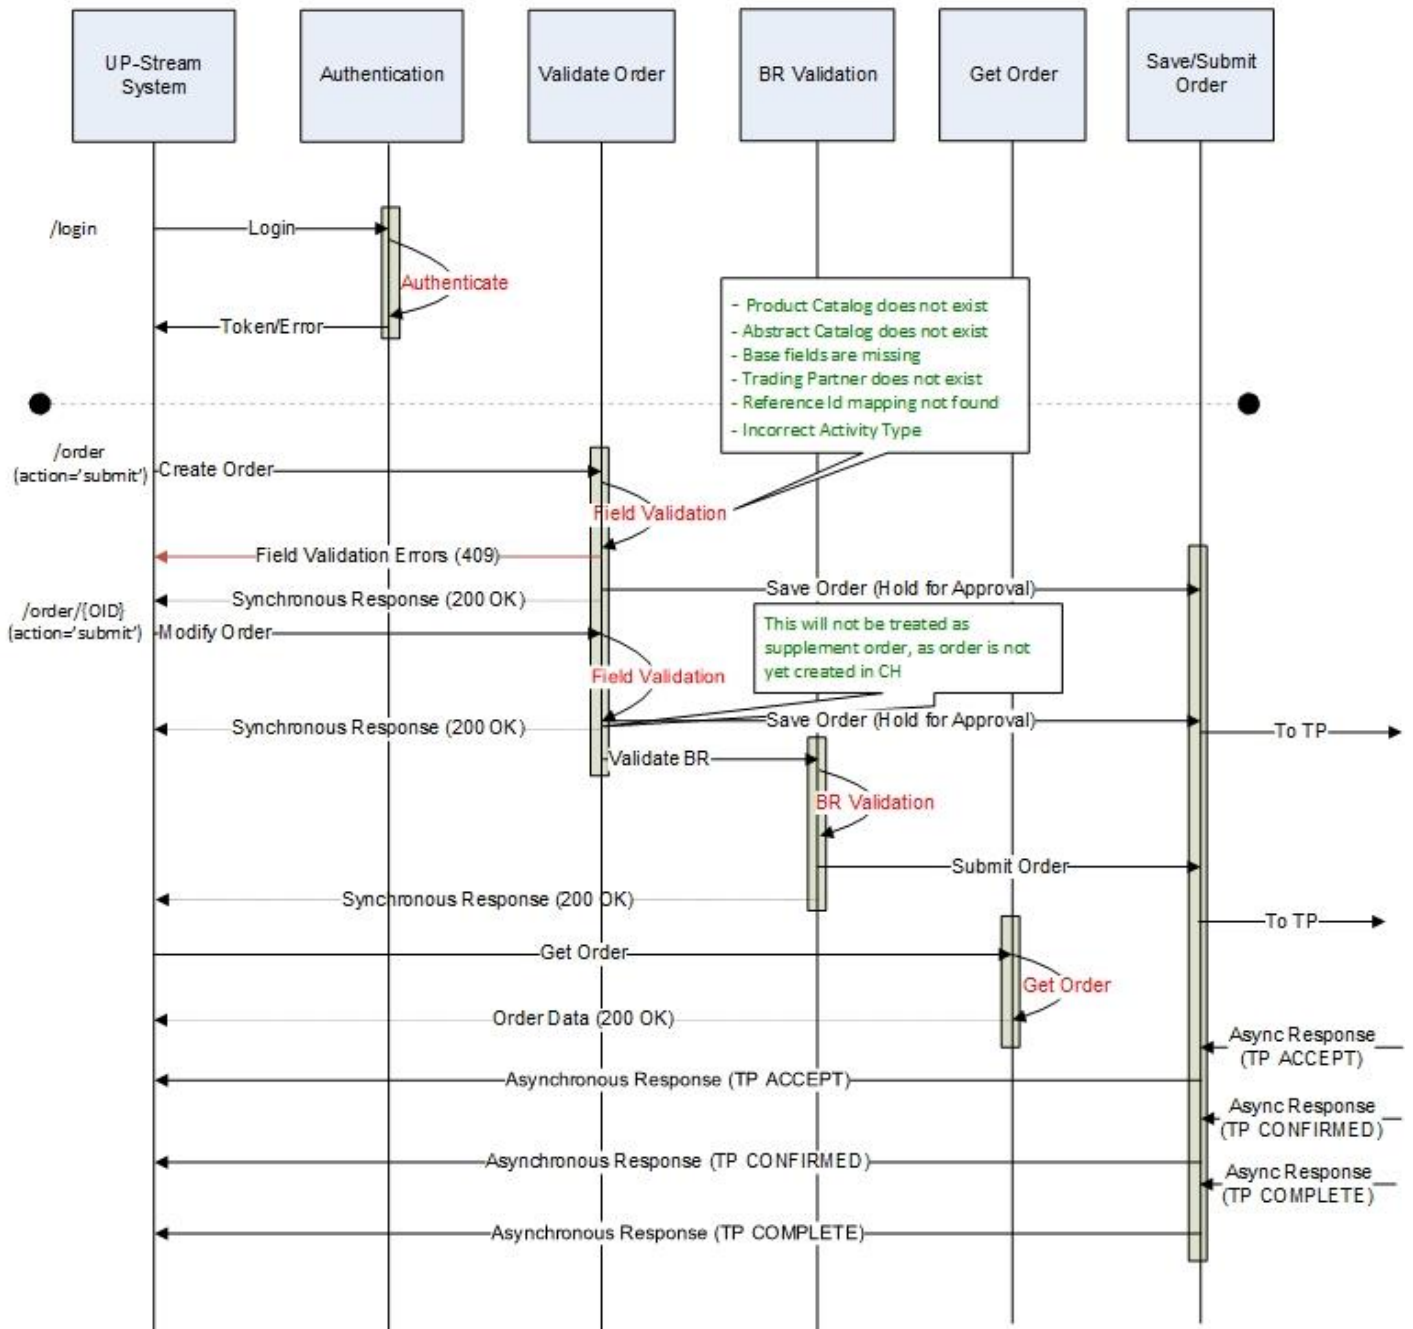

UOM- Submit Order (Rainy Day) Flow Diagram

7.6 Create Order (Rainy Day) – Scenario 3

The following sequence diagram provides the sequence of activities performed during a Create Order action performed by the User. In this scenario when user modifies order which is in 'Hold for approval' status and not yet submitted to CH, This order modification will not be treated as supplement order.

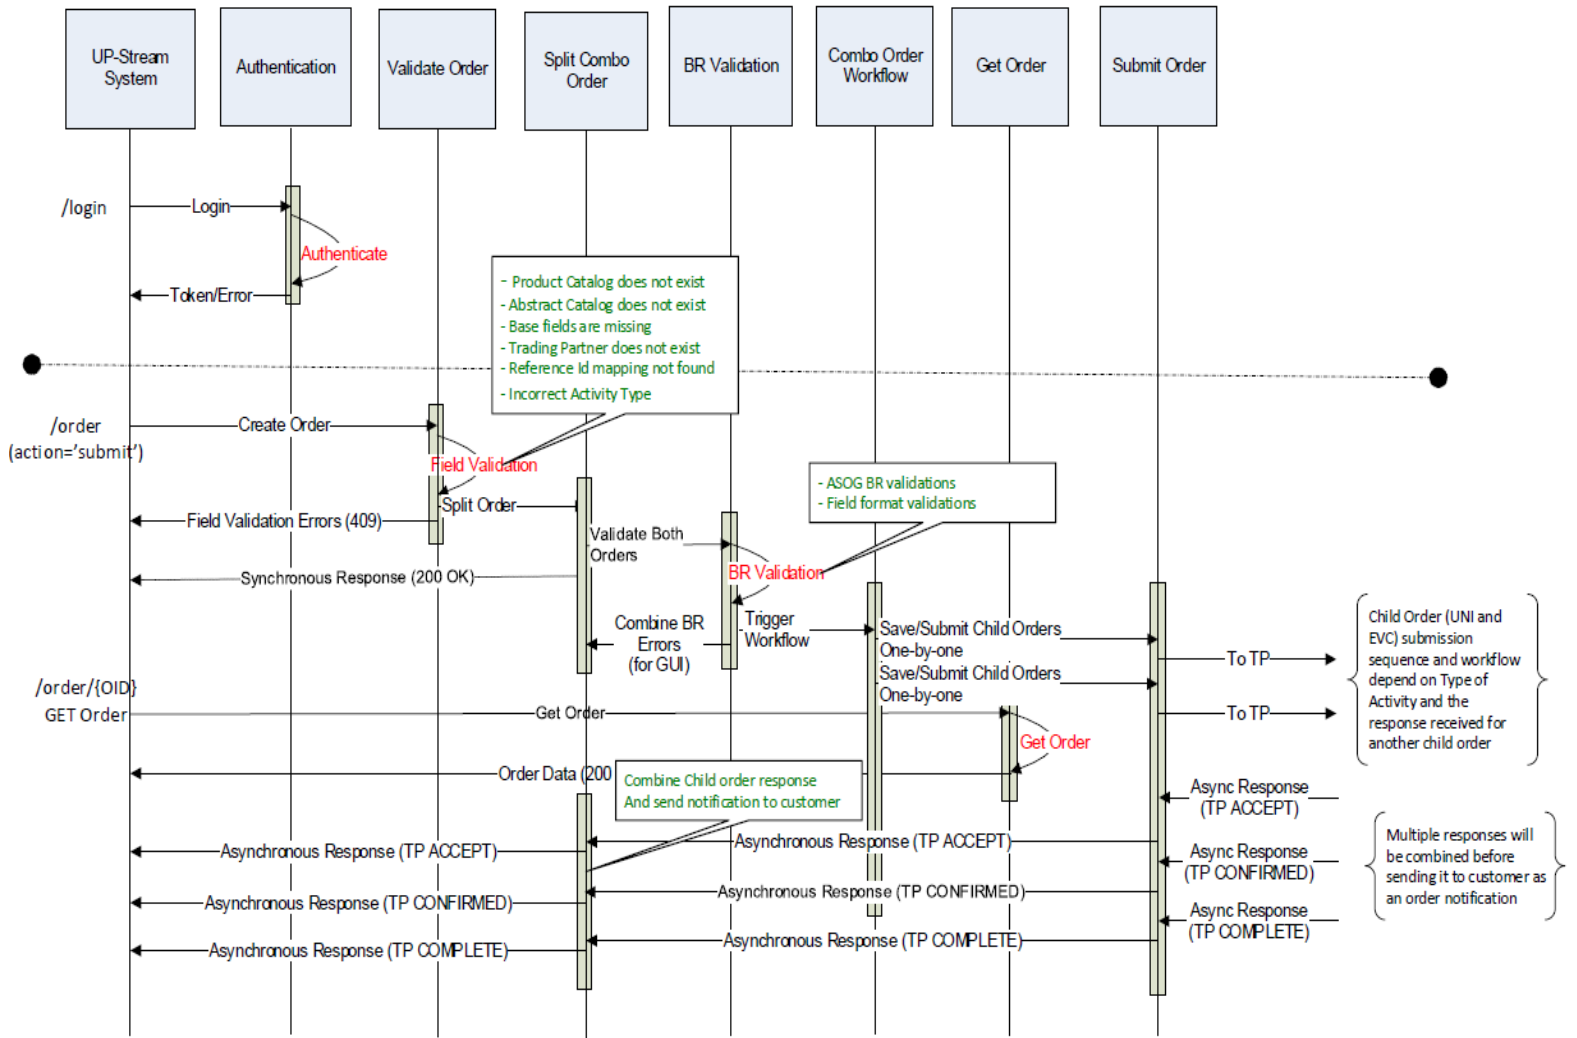

UOM- Submit Order (Rainy Day) Flow Diagram

7.7 Create Combo Order (applicable for ASR application only)

If the TP doesn't support combo order – then order will be split in to 2 child order (UNI and EVC) and will be sent to CH for processing. Child order submission flow depends on the type of activity and response received for other child order.

UOM- Submit Combo Order (TP doesn't support Combo Order)
Flow Diagram

8 Ordering Module API Details for Buyer & Seller

Services require you to submit requests directly to the UOC. This chapter provides specific details on sending Service Requests and receiving Service Response messages.

8.1 Services

The Services are single transaction processing requests. They include:

Login

Catalog

Order

8.2 Login

The login API would be responsible for authenticating the user and returning the access token back to the caller. The returned token must be passed in subsequent requests to UOC in the header. This token is also responsible for identifying the particular customer for each request.

8.2.1 Request:

8.2.2 URL:

<https://{baseurl}/login>

8.2.3 HTTP Method:

8.2.4 POST

8.2.4.1 Header

Accept: application/json

8.2.4.2 Body:

Table 5: Login API Body Parameters

Name	Description
domain	The customer domain that the user belongs to.
username	The login name of the user.
password	The password of the user.

8.2.4.3 Sample Request

```
{
  "domain" : "TEST_E2E",
  "username" : "user1",
  "password" : "passwd"
}
```

8.2.5 Resposne

The application will respond with the access token upon successful login or an error message for an invalid login.

8.2.5.1 Successful response

Response Code: 200 OK

Token will be returned in response hader "Authorization"

8.2.5.2 Failure Response

Response Code: 401 Unauthorized

Response Body:

```
{
  {
    "status" : "failure",
    "statusCode" : "1000",
    "errorList" : [{
      "errorCode" : "<code>",
      "description" : "Invalid Credentials"
    }]
  }
}
```

Subsequent requests to the API will pass this token in the header as shown below.

HTTP Header - Authorization: Bearer <token>

8.3 Catalog

Catalogs or Products are the templates that are used to create orders. The catalogs contain the Application, fields, fied metadata information.

8.4 Get Catalog

This API is used to get catalog details. The {id} can be any one of the two parameters - catalogId, catalogName. For example, if the {id} in the URI is a catalogId then header value should be "catalogId" like wise user has to pass the header value accordingly.

8.4.1 Request

8.4.2 URI

<https://{baseurl}/cataloginfo/{Id}>

8.4.3 HTTP Method

GET

8.4.4 Header

Accept : application/json

Authorization : Bearer <token>

GetBy : "catalogId " OR "catalogName"

8.4.5 Response

8.4.6 Successful Response

Response Code: HTTP 200 OK

Response Body:

```
{
  "status": "Success",
  "statusCode": "0000",
  "message": null,
  "data": {
    "catalogId": 1314856,

8.4.7 Failure Response

Response Code: HTTP 404 Not Found

Response Body:

```
{
  "status": "failure",
  "statusCode": "1000",
  "errorList": [
    {
      "errorCode": "U1041",
      "description": "Invalid input CATALOG_ID=1314856Q and
should be a valid number.",
      "arguments": [
        "CATALOG_ID",
        "1314856Q",
        "TEST_E2E"
      ]
    }
  ]
}
```

8.5 Search Catalog

This API is used to search existing catalogs. This is a POST request and accepts various parameters for the search.

8.5.1 Request

8.5.2 URI

<https://{baseurl}/catalog/search>

8.5.3 HTTP Method

POST

8.5.4 Header

Accept : application/json

Authorization : Bearer <token>

8.5.5 Body

Name	Description
catalogId	This is used to fetch catalog by its ID, this is an optional field in search catalog request.
catalogName	By using this parameter we can search catalogs by name. In this '%' wild card is allowed at the start or at the end of string.

	This is an optional field in search catalog request.
applicationId	Underlying application for the Catalog, this is a required field in search catalog request.

8.5.5.1 Sample Requests:

```
{
  "catalogName" : "DEMO%",
  "applicationId" : [
    "ASR_SEND"
  ]
}
```

```
{
  "catalogId" : "160",
  "referenceId" : "123123",
  "applicationId" : [
    "ASR_SEND"
  ]
}
```

```
{
  "applicationId" : [
    "ASR_SEND"
  ]
}
```

8.5.5.2 Successful response

Response Code: HTTP 200 OK

Response Body:

```
[
  {
    "catalogId" : 160,
    "referenceId" : "1231",
    "catalogName" : "DEMO POC2.0",
    "domainName" : "TEST_E2E",
    "userName" : "example",
    "applicationName" : "ASR Send",
    "createdDate" : "08/30/2018 09:30:21",
    "updatedDate" : "08/30/2018 09:38:24",
    "isEnabled" : true
  },
]
```

```
{
  "catalogId" : 94,
  "referenceId" : "1221",
  "catalogName" : "DEMO TEST POC2.0",
  "domainName" : "TEST_E2E",
  "userName" : "example",
  "applicationName" : "ASR Send",
  "createdDate" : "08/30/2018 09:35:29",
  "updatedAt" : "08/30/2018 09:38:24",
  "isEnabled" : true
}
```

8.5.5.3 Failure response

Response Code: HTTP 404 Not Found

Response Body:

```
{
  "status": "failure",
  "statusCode" : "1000",
  "errorList" : [{
    "errorCode" : "<code>",
    "description" : "Catalog not found for given
search criteria"
  }]
}
```

8.6 Order

UOC application will accept the orders with minimal information from GUI or through API. Orders are created using the catalogs as templates. These would be enriched, transformed before sending to Trading Partners.

Any field that is part of the catalog and has default value will automatically be added if not provided explicitly.

Assumptions made for create/get order JSON example:

- Fields having default value in catalog are not added in sample create/update order JSON payload shared below.
- Fields which are generated as a part of enrichment are not added in create/update order JSON payload shared below.
- Universal & Product catalogs are available and required mapping is done.

--

8.7 Create Order for UOC Buyer

Create Order API is used to create order by using catalog as a template. The order data that is received will be enriched by business logic.

8.7.1 Request

8.7.1.1 URI

<https://{baseurl}/order>

8.7.1.2 HTTP Method

POST

8.7.1.3 Header

Accept : application/json

Authorization : Bearer <token>

TransactionId : <STRING_TRANSACTION_ID>

8.7.1.4 Body

Name	Description
productCatalogName	Name of the product catalog to use for this order.
universalCatalogName	Name of the universal catalog to use for this order.
tradingPartner	The trading partner for which the order is submitted.
activity	Possible values for activity are (Install, Change, Disconnect, Inside Move, Outside Move, Record)
action	Possible values for Action are (save, submit, validate).
productOrder[]	Repeating group containing product section information

universalOrder[]	Repeating group containing Universal section information
productOrder[].sectionName OR universalOrder[].sectionName	Name of the section
productOrder[].fields OR universalOrder[].fields	Repeating section containing field information
productOrder[].fields[].fieldName OR universalOrder[].fields[].guiAliasName	This will be the fieldName or guiAliasName from the catalog. guiAliasName is optional
productOrder[].fields[].value OR universalOrder[].fields[].value	The value for the field.
productOrder[].subSections[] OR universalOrder[].subSections[]	Repeating group of sub sections within a section.

8.7.1.5 Sample Create Order Message Template

```
{
  "action": "string",
  "activity": "string",

8.7.2 Response

8.7.2.1 Successful Response

Body Fields:

Name	Description
status	Status of the API call
message	
statusCode	Status code (please refer attached excel sheet with details in section 7.5)
info.transactionId	transactionId from request.
info.application	Application of an order
info.universalCatalogName	Universal Catalog name
info.productCatalogName	Product catalog name
info.buyerOrderID, info.uocOrderID	Customer generated and user generated order id
info.orderStatus	Status of an order (please refer attached excel sheet in section 7.5)
info.requestNumber	Purchase order Number (PON)
info.buyerVersion	Order version
info.activityType	Order activity (Please refer attached excel sheet in section 7.5)
Info.supplementType	Supplement type of an order – refer appendix for possible values for this field
info.activityId	Id of the order activity
info.tradingPartner	Trading partner – to which order will be submitted
info.sellerID	ICSC – seller id of an order
info.buyerID	CCNA – buyer id of an order
info.project	Project of an order

Info.endUser and info.endUserAddress	endUser and endUserAddress for order created
info.owner	Owner of an order
info.createdDate	Order created date
info.lastUpdated	Last order update date
Additional info block attributes	Refer section : 9.2.6 Additional Info block attributes
Additional info block attributes	Refer section : 9.2.6 Additional Info block attributes

Response Code: HTTP 201 OK

Response Body (For action=save, action=submit):

```
{
  "status": "Success",
  "statusCode": "0000",
  "message": "PON: TX183510590101U has been successfully submitted.",
  "info": {
    "universalCatalogName": "UNIVERSAL",
    "productCatalogName": "ASR TRANSPORT SPECIAL ACCESS",
    "universalCatalogId": 59151,
    "productCatalogId": 59951,
    "uocOrderKey": 3171354,
    "orderStatus": "SUBMITTED",
    "activityId": "N",
    "activityType": "Install",
    "tradingPartner": "Green Tea Telecom",
    "transactionId": "112233",

}
```

8.7.2.2 Failure Response: Process Errors

Response Code: HTTP 409 Conflict

Response Body:

The response body will contain a list of validation errors and status as failure.

Possible error examples:

- Product Catalog does not exist
- Universal Catalog does not exist
- Base fields are missing
- Trading Partner does not exist
- Incorrect activity type

```
{
  "status" : "failure",
  "statusCode" : "1000",
  "errorList" : [{
    "errorCode" : "<code>",
    "description" : "Product Catalog does not exist"
  }]
}
```

```
{
  "status" : "failure",
  "statusCode" : "1000",
  "errorList" : [{
    "errorCode" : "<code>",
    "description" : "CCNA : Base field is missing"
  }]
}
```

```
}

```

8.7.2.3 Failure Response: Input Errors

Response Code: HTTP 400 Bad Request

8.8 Update Order for UOC Buyer

This API is used to update orders which are created in UOC. This API accepts requestNumber or uocOrderId or customerOrderId as a path params and complete order json in body. HTTP PUT method is used for this.

8.8.1 Request

8.8.1.1 URI

<https://{baseurl}/order/{id}>

Id – This 'Id' parameter will be decided by 'UpdateBy' Header.

The {id} can be any one of the three parameters - requestNumber, uocOrderId, customerOrderId. For example, if the {id} in the URI is a requestNumber then header value should be "requestNumber" like wise user has to pass the header value accordingly.

8.8.1.2 HTTP Method

PUT

8.8.1.3 Header

Accept : application/json

Authorization: Bearer <token>

UpdateBy: requestNumber **OR** uocOrderId **OR** customerOrderId

TransactionId : <STRING_TRANSACTION_ID>

8.8.1.4 Body

Name	Description
productCatalogName	Name of the product catalog to use for this order.
universalCatalogName	Name of the universal catalog to use for this order.

tradingPartner	The trading partner for which the order is submitted.
activity	Possible values for activity are (Install, Change, Disconnect, Inside Move, Outside Move, Record)
action	Possible values for Action are (save, submit, validate).
productOrder[]	Repeating group containing product section information
universalOrder[]	Repeating group containing Universal section information
productOrder[].sectionName OR universalOrder[].sectionName	Name of the section
productOrder[].fields OR universalOrder[].fields	Repeating section containing field information
productOrder[].fields[].fieldName OR universalOrder[].fields[].fieldName	This will be the fieldName or guiAliasName from the catalog.
productOrder[].fields[].value OR universalOrder[].fields[].value	The value for the field.

8.8.1.5 Sample Update Order Request Template:

```

{
  "action": "string",

8.8.2 Response

8.8.2.1 Successful Response

Response Code: HTTP 200 OK

Response Body fields:

Name	Description
status	Status of the API call
statusCode	Status code (please refer attached excel sheet with details in section 7.5)
info.transactionId	transactionId from request.
info.application	Application of an order
Info.supplementType	Supplement type of an order – refer appendix for possible values for this field
info.universalCatalogName	Universal Catalog name
info.productCatalogName	Product catalog name
info.buyerOrderID, info.uocOrderID	Customer generated and user generated order id
info.orderStatus	Status of an order (please refer attached excel sheet in section 7.5)
info.requestNumber	Purchase order Number (PON)
info.buyerVersion	Order version

info.activityType	Order activity (Please refer attached excel sheet in section 7.5)
info.activityId	Id of the order activity
info.tradingPartner	Trading partner – to which order will be submitted
info.sellerID	ICSC – seller id of an order
info.buyerID	CCNA – buyer id of an order
info.project	Project of an order
info.endUser and info.endUserAddress	endUser and endUserAddress for order created
info.owner	Owner of an order
info.createdDate	Order created date
info.lastUpdated	Last order update date
Additional info block attributes	Refer section : 9.2.6 Additional Info block attributes
Additional info block attributes	Refer section : 9.2.6 Additional Info block attributes

Response Body (For action=save, action=submit):

```

    "description" : "PON : Base field is missing"
  }]
}
```

8.8.2.3 Failure Response: Input Errors

Response Code: HTTP 400 Bad Request

8.9 Cancel Order for UOC Buyer

This API is used to cancel orders which are created in UOC. This API accepts requestNumber or uocOrderId or customerOrderId as a path params and complete order json in body. HTTP PUT method is used for this.

8.9.1 Request

8.9.1.1 URI

<https://{baseurl}/order/{id}/cancel>

Id – This 'Id' parameter will be decided by 'CancelBy' Header.

The {id} can be any one of the three parameters - requestNumber, uocOrderId, customerOrderId. For example, if the {id} in the URI is a requestNumber then header value should be "requestNumber" like wise user has to pass the header value accordingly.

8.9.1.2 HTTP Method

PUT

8.9.1.3 Header

Authorization: Bearer <token>

CancelBy: requestNumber **OR** uocOrderId **OR** customerOrderId

TransactionId : <STRING_TRANSACTION_ID>

8.9.2 Response

8.9.2.1 Successful Response

Response Code: HTTP 200 OK

Response Body fields:

Name	Description
status	Status of the API call
statusCode	Status code (please refer attached excel sheet with details in section 7.5)
info.transactionId	transactionId from request.
info.application	Application of an order
Info.supplementType	Supplement type of an order – refer appendix for possible values for this field

info.universalCatalogName	Universal Catalog name
info.productCatalogName	Product catalog name
info.buyerOrderID, info.uocOrderID	Customer generated and user generated order id
info.orderStatus	Status of an order (please refer attached excel sheet in section 7.5)
info.requestNumber	Purchase order Number (PON)
info.buyerVersion	Order version
info.activityType	Order activity (Please refer attached excel sheet in section 7.5)
info.activityId	Id of the order activity
info.tradingPartner	The trading partner for which the order is submitted.
info.sellerID	ICSC – seller id of an order
info.buyerID	CCNA – buyer id of an order
info.project	Project of an order
info.endUser and info.endUserAddress	endUser and endUserAddress for order created
info.owner	Owner of an order
info.createdDate	Order created date
info.lastUpdated	Last order update date
Additional info block attributes	Refer section : 9.2.6 Additional Info block attributes
Additional info block attributes	Refer section : 9.2.6 Additional Info block attributes

  }]
}

```

```

    }
  }
}

```

8.9.2.3 Failure Response: Input Errors

Response Code: HTTP 400 Bad Request

8.10 Get Order

This API is used to get Order details for particular orderId and version. This is a HTTP GET request.

8.10.1 Request

8.10.1.1 URI

<https://{baseurl}/order/{id}>

Id – This 'Id' parameter will be decided by 'GetBy' Header.

The {id} can be any one of the three parameters - requestNumber, uocOrderId, customerOrderId. So, from now all the API calls should pass a new header parameter as stated below. For example, if the {id} in the URI is a requestNumber then header value should be "requestNumber" like wise user has to pass the header value accordingly.

8.10.1.2 HTTP Method

GET

8.10.1.3 Header

Accept : application/json

Authorization: Bearer <token>

GetBy: requestNumber OR uocOrderId OR customerOrderId

8.10.2 Response

8.10.2.1 Successful Response

Response Code: HTTP 200 OK

Response Body Fields:

Name	Description
status	Status of the API call
statusCode	Staus code (please refer attached excel sheet with details in section 7.5)

info.universalCatalogName	Universal Catalog name
info.transactionId	transactionId from request.
info.supplementType	Supplement type of an order – refer appendix for possible values for this field
info.productCatalogName	Product catalog name
info.productCatalogID, info.universalCatalogID	Catalog Ids used in order
info.activityId	Id of the order activity
info.application	Application of an order
info.buyerOrderID, info.uocOrderID	Customer generated and user generated order id
info.orderStatus	Status of an order (please refer attached excel sheet in section 7.5)
info.requestNumber	Purchase order Number (PON)
info.buyerVersion	Order version
info.activityType	Order activity (Please refer attached excel sheet in section 7.5)
info.tradingPartner OR info.seller	The trading partner for which the order is submitted. For marketplace customers – 'seller' field can be used For All other customers – either of 'tradingPartner' OR 'seller' can be used
info.sellerID	ICSC – seller id of an order
info.buyerID	CCNA – buyer id of an order
info.project	Project of an order
info.endUser and info.ndUserAddress	endUser and endUserAddress for order created
info.owner	Owner of an order

info.createdDate	Order created date
info.lastUpdated	Last order update date
productOrder[]	Repeating group containing product section information
universalOrder[]	Repeating group containing Universal section information
productOrder[].sectionName OR universalOrder[].sectionName	Name of the section
productOrder[].fields OR universalOrder[].fields	Repeating section containing field information
productOrder[].fields[].fieldName OR universalOrder[].fields[].fieldName	This will be the fieldName or guiAliasName from the catalog.
productOrder[].fields[].value OR universalOrder[].fields[].value	The value for the field.
Additional info block attributes	Refer section : 9.2.6 Additional Info block attributes

8.10.2.3 Failure Response

Response Code: HTTP 404 Not Found

Response Body:

```

{
  "status" : "failure",
  "statusCode" : "1000",
  "errorList" : [{
    "errorCode" : "<code>",
    "description" : "Order not found for given Order
number and version"
  }
]
}

```

8.11 Get Order PDF

This API is used to retrieve all order details in PDF format over the API. Get PDF API will return either order or response or both order and response in pdf file based on the parameter provided in API request.

8.11.1 Request

8.11.1.1 URI

<https://{baseurl}/orderpdf>

8.11.1.2 HTTP Method

POST

8.11.1.3 Header

Authorization : Bearer <token>

8.11.1.4 Body

Name	Description
orderKey	Value of this field is either request number or uom order id or customer order id. Its decided by the keyType property. This parameter is mandatory.
keyType	<p>Represent whether the orderKey value is request number or uom order id or customer order id.</p> <p>Value can be any one of the below options -</p> <p>REQUESTNUMBER UOCORDERID CUSTOMERORDERID</p> <p>For example, if the orderKey value is a request number then value should be "REQUESTNUMBER" like wise user has to pass the value accordingly. This parameter is mandatory.</p>
version	Order version. Possible values are ALL, LATEST or specific version i.e. 01 etc. This parameter is mandatory.
request	<p>Specify whether to include universal or product or asr order in PDF file.</p> <p>Possible values can be any or combination of the below options -</p> <p>UNIVERSAL - include universal order PRODUCT - include product order ASR - include asr order. Applicable only for ASR order.</p>

	<p>ALL - include all universal, product and asr order.</p> <p>For example, values for request can be ["ALL"] or ["UNIVERSAL,"PRODUCT"] or ["ASR"].</p> <p>For broadband/MEF order, ASR option is not applicable and would be ignored if specified by user. This parameter is mandatory.</p>
responses	<p>Specify whether to include specific response or all response of order in PDF file.</p> <p>Possible values can be any or combination of the below options -</p> <p>TP REJECT TP ERROR TP ADDRESS ERROR TP COMPLETE TP SITE READINESS TP ACCEPT TP CONFIGURED TP CONSTRUCTION TP PROVISIONING TP DLR TP CANCELED CANCELED TP CONFIRMED TP INFORMATIONAL TP JEOPARDY TP CLEAR TP PTA</p> <p>ALL - include all the response received for that order.</p> <p>For example, values for request can be ["ALL"] or ["TP ACCEPT"] or ["TP ACCEPT","TP CONFIRMED","TP COMPLETE"].</p>

8.11.1.5 Sample Request

```
{
```

```

"orderKey": "313CDPONIER24",
"keyType": "REQUESTNUMBER",
"version": "01",
"request": ["ALL"],
"responses": ["ALL"]
}

```

8.11.2 Resposne

8.11.2.1 Successful response

API response will return a PDF.

OrderPDF.pdf

8.12 Search Order

This API is used for searching the existing orders, which are created in UOC. This is a POST request and accepts various parameters. All Parameters are optional. If no search parameters are provided, API will return orders for the last 30 days (configurable). Also date ranges in search parameters are restricted to 30 days.

8.12.1 Request

8.12.1.1 URI

<https://{baseurl}/order/search>

8.12.1.2 HTTP Method

POST

8.12.1.3 Header

8.12.2 Accept : application/json

8.12.3 Authorization : Bearer <token>

8.12.3.1 Body

Name	Description
viewType	Supported value for search order - "searchOrder"
buyerOrderID/ uocOrderID	Order Number to search.
universalCatalogId/productCatalogId	Catalog used for order creation, multi select possible.

orderGroupedStatus	Custom status group name created
activityType	Activity for which order is created, multi select possible.
orderStatus	Activity of an order, multi select possible.
orderFlag	Order flag – custom created in UOC per domain
requestNumber	Comma separated list of request numbers to search
sellerOrderNumber	Seller/Trading partner order number
groupID	groupID to search
project	Project to search
tradingPartner	The trading partner for which the order is submitted.
address	End user address to search
applicationId	Application to search
buyerID/sellerID	Buyer and seller id used in order
taskStatus	Current status of a task if any
slaGrouping	SLA status if any on slaMilestone
slaMilestone	SLA milestone on specific order status
endUser	End user of particular order, multi select possible.
Init	User who initiated the order, multi select possible.
owner	Owner of the order.
createdDateFrom/createdDateTo	Created date range : to – from
desiredDueDateFrom/desiredDueDateTo	Desired Due Date : to – from

8.14 Order Resposne Notifications for UOC Buyer

Below JSON format will be used to push order responses to Customers. Customers need to develop a REST service which will accept request in below format.

8.14.1.1 HTTP Method

POST

8.14.1.2 Header

Accept : application/json

8.14.1.3 Body

Name	Description
info.transactionId	transactionId from request.
info.responseSeqId	Response Sequence Number (Autogenerated).
info.universalCatalogName	Universal Catalog name
info.productCatalogName	Product catalog name
info.productCatalogID, info.universalCatalogID	Catalog Ids used in order
info.buyerOrderID, info.uocOrderID	Customer generated and user generated order id
info.orderStatus	Status of an order (please refer attached excel sheet in section 7.5)
info.requestNumber	Purchase order Number (PON)
info.buyerVersion	Order version
info.activityId	Id of the order activity
info.application	Application of an order
Info.supplementType	Supplement type of an order – refer appendix for possible values for this field
info.activityType	Order activity (Please refer attached excel sheet in section 7.5)

info.tradingPartner OR info.seller	The trading partner for which the order is submitted. For marketplace customers – 'seller' field can be used For All other customers – either of 'tradingPartner' OR 'seller' can be used
info.sellerID	ICSC – seller id of an order
info.buyerID	CCNA – buyer id of an order
info.project	Project of an order
info.endUser and endUserAddress	endUser and endUserAddress for order created
info.owner	Owner of an order
info.createdDate	Order created date
info.universalCatalogId / productCatalogId	Catalog ids used in order
info.lastUpdated	Last order update date
productOrder[]	Repeating group containing product section information
universalOrder[]	Repeating group containing Universal section information
productOrder[].sectionName OR universalOrder[].sectionName	Name of the section
productOrder[].fields OR universalOrder[].fields	Repeating section containing field information
productOrder[].fields[].fieldName OR universalOrder[].fields[].fieldName	This will be the fieldName or guiAliasName from the catalog.
productOrder[].fields[].value OR universalOrder[].fields[].value	The value for the field.
response[].responseType	This field show type of response for the order – For standalone (UNI/EVC) orders it will be same as 'orderStatus' for combo

	orders it will be prepended with 'PORT-' or 'EVC-' on individual PORT and EVC order statuses
response[].sections[].sectionName	Response section name
response[].sections[].fields[].fieldName	Response field name
response[].sections[].fields[].guiAliasName	gui alias name - defined in the response catalog
response[].sections[].fields[].value	Response field value
Additional info block attributes	Refer section : 9.2.6 Additional Info block attributes

8.15 Create Order Response for UOC Seller

Create response API is for marketplace customers and it's used to create order response by using catalog as a template. The response data that is received will be enriched by business logic.

8.15.1 Request

8.15.1.1 URI

<https://{baseurl}/response/{id}>

Id – This 'Id' parameter will be decided by 'UpdateBy' Header.

The {id} can be any one of the three parameters - requestNumber, uocOrderId, customerOrderId. For example, if the {id} in the URI is a requestNumber then header value should be "requestNumber" like wise user has to pass the header value accordingly.

8.15.1.2 HTTP Method

POST

8.15.1.3 Header

Accept : application/json

Authorization : Bearer <token>

TransactionId : <STRING_TRANSACTION_ID>

UpdateBy: requestNumber **OR** uocOrderId **OR** customerOrderId

8.15.1.4 Body

Name	Description
responseCatalogName	Name of the response catalog to use for this order.
action	Possible values for Action are (save is not supported, submit, validate).
response[].responseType	Types of response
response [].sections[].sectionName	Name of the section
response [].sections[].sectionName.fields OR	Repeating section containing field information
response [].sections[].sectionName fields[].fieldName	This will be the fieldName or guiAliasName from the catalog. guiAliasName is optional
response [].sections[].sectionName.fields[].value	The value for the field.

response <code>[].sections[].sectionName.subSections[]</code>	Repeating group of sub sections within a section.
--	---

8.15.1.5 Sample Create Response Template

```

{
  "action": "submit",
  "activity": "String",
  "tradingPartner": "String",
  "responseCatalogName": "String",
  "response": [{
    "responseType": "String",
    "sections": [{
      "sectionName": "String",
      "fields": [{
        "fieldName": "String",
        "value": "String"
      }],
      "index": 1,
      "subSections": [{
        "sectionName": "String",
        "fields": [{
          "fieldName": "String",
          "value": "String"
        }],
        "index": 1,
        "subSections": []
      }
    ]
  }]
}

```

8.15.1.6 Sample Create Response – TP ACCEPT

```

{
  "action": "submit",
  "activity": "Install",
  "tradingPartner": "GTT_PROD",
  "responseCatalogName": "ASR SEND ACKNOWLEDGEMENT",
  "response": [
    {
      "responseType": "TP ACCEPT",
      "sections": [
        {

```

```
"sectionName": "Administrative Section",
"fields": [
  {
    "fieldName": "ASR_NO",
    "value": "TEST"
  },
  {
    "fieldName": "CCNA",
    "value": "WCG"
  },
  {
    "fieldName": "FID",
    "value": "01"
  },
  {
    "fieldName": "ICSC",
    "value": "CU01"
  },
  {
    "fieldName": "PON",
    "value": "TESTG714001"
  },
  {
    "fieldName": "REFNUM",
    "value": "TEST"
  },
  {
    "fieldName": "VER",
    "value": "01"
  },
  {
    "fieldName": "UREF",
    "value": "01"
  },
  {
    "fieldName": "ERROR",
    "value": "TEST"
  }
],
"index": 1,
"subSections": [
  {
    "sectionName": "Other Administrative
Data",
    "fields": [

  }
]
}

```

8.15.2 Response

8.15.2.1 Successful Response

Body Fields:

Name	Description
status	Status of the API call
statusCode	Status code (please refer attached excel sheet with details in section 7.5)
info.transactionId	transactionId from request.
info.application	Application of an order
info.universalCatalogName	Universal Catalog name
info.productCatalogName	Product catalog name
info.buyerOrderID, info.uocOrderID	Customer generated and user generated order id

info.orderStatus	Status of an order (please refer attached excel sheet in section 7.5)
info.requestNumber	Purchase order Number (PON)
info.buyerVersion	Order version
info.activityType	Order activity (Please refer attached excel sheet in section 7.5)
info..supplementType	Supplement type of an order – refer appendix for possible values for this field
info.activityId	Id of the order activity
info.tradingPartner	Trading partner – to which order will be submitted
info.sellerID	ICSC – seller id of an order
info.buyerID	CCNA – buyer id of an order
info.project	Project of an order
info.endUser and info.endUserAddress	endUser and endUserAddress for order created
info.owner	Owner of an order
info.createdDate	Order created date
info.lastUpdated	Last order update date
Additional info block attributes	Refer section : 9.2.6 Additional Info block attributes

Response Code: HTTP 201 OK

Response Body (For action=save, action=submit):

```
{
  "status": "Success",
  "statusCode": "0000",
  "message": "Response type: TP ACCEPT submitted successfully
for PON: DEMO 040121-2",
  "info": {
    "universalCatalogName": "UNIVERSAL",
    "productCatalogName": "ASR TRANSPORT SPECIAL ACCESS",
    "productCatalogId": 1094059,

    }
  ]
}

```

8.15.2.2 Failure Response: Process Errors

Response Code: HTTP 409 Conflict

Response Body:

The response body will contain a list of validation errors and status as failure.

Possible error examples:

- Catalog does not exist
- Base fields are missing
- Order does not exist

- Incorrect activity type

```
{
  "status" : "failure",
  "statusCode" : "1000",
  "errorList" : [{
    "errorCode" : "<code>",
    "description" : "Catalog does not exist"
  }]
}
```

```
{
  "status" : "failure",
  "statusCode" : "1000",
  "errorList" : [{
    "errorCode" : "<code>",
    "description" : " Base field is missing"
  }]
}
```

8.15.2.3 Failure Response: Input Errors

Response Code: HTTP 400 Bad Request

8.16 Attach Documents

This feature allows attaching documents for the order/response transactions. Attached document information will be included in response/order API notifications communicated to the Buyer/Seller using which user can download the attached document over API. Multiple documents can be attached to Order/Response. Maximum of 5 are supported.

Attach documents to an Order/Response as below:

1. Upload the document using the **document/attachDocumentID** API. This API returns a Document ID.
2. Set the Document ID in the **attachDocumentId** list when creating an Order or Response.

Download documents attached to an Order/Response as below:

1. The Document details along with the Document ID are populated on the Order/Response API Notification, if applicable. Document Details can also be retrieved using the **document/search** API.
2. Download the document by passing the Document ID to the **document /attachDocumentId** API.

8.16.1 Upload Documents

This API is used for uploading documents which can be used to attach to order/response based on the uploaded document docAssociation param value using the attachDocumentID of the document.

8.16.1.1 Request

8.16.1.1.1 URI

<http://{baseurl}/document/attachDocumentID>

8.16.1.1.2 HTTP Method

POST

8.16.1.1.3 Request Parameters

Name	Description
category	Order Attachment
title	Document Title
description	Add Note or Description
docAssociation	Value should be 'O' for uploading document to be attached to order. Value should be 'R' for uploading document to be attached to response.

8.16.1.1.4 Header

Accept: application/json

Authorization: Bearer <token>

8.16.1.1.5 URI with Request Parameters

<http://{baseurl}/document/attachDocumentID?category=Order Attachment&title=Test API Upload &description=Api Test upload Desc&docAssociation=O>

8.16.1.1.6 Body

Name	Description
file	File to be uploaded

8.16.1.2 Response

8.16.1.2.1 Successful response

```
{
  "status": "Success",
  "statusCode": "0000",
  "message": "Test.pdf Uploaded succesfully.",
  "info": {
    "createdDate": "2022-06-15 07:26:32",
    "attachDocumentId": 13084254,
    "uploadedBy": "uomuser"
  }
}
```

8.16.2 Attach Documents to Order Version

Use the **attachDocumentId** node value from the **document/attachDocumentID** upload API response and populate it in the **attachDocumentId** attribute array in the Request Payload when creating or updating order through API.

E.g Sample Request Payload for Create Order

```
{
  "activity": "Install",
  "tradingPartner": "COX COMMUNICATIONS",
  "action": "submit",
  "productCatalogName": "METRO E",
  "universalCatalogName": "ACCESS ABSTRACT 1",
  "attachDocumentId": [
    13084252
  ],
  "universalOrder": [
    ...
  ],
  "productOrder": [
    ...
  ]
}
```

8.16.3 Attach Documents to Response Version

Use the **attachDocumentId** node value from the **document/attachDocumentID** upload API response and populate it in the **attachDocumentId** attribute array in the Request Payload when creating Response through API.

E.g Sample Request Payload for Create Response

```

{
  "action": "submit",
  "activity": "Install",
  "tradingPartner": "COX COMMUNICATIONS",
  "responseCatalogName": "ASR SEND ACKNOWLEDGEMENT",
  "attachDocumentId": [
    13084252
  ],
  "response": [
    {
      "responseType": "TP ACCEPT",
      "sections": [ ... ]
    }
  ]
}

```

8.16.4 Attach Document to Order

8.16.4.1 Request

8.16.4.1.1 URI

<http://{baseurl}/document/attachDocumentID>

8.16.4.1.2 HTTP Method

POST

8.16.4.1.3 Request Param

Name	Description
orderId	Existing uocOrderKey value from create/update order success response or getOrder api response. This param attaches note to order.
category	Order Attachment
title	Document Title
description	Add Note or Description
docAssociation	Value should be 'N' for uploading note document to be attached to order.

8.16.4.1.4 Header

Accept: application/json

8.16.4.1.5 Body

Name	Description
file	File to be uploaded

8.16.4.2 Response

8.16.4.2.1 Successful response

```
{
  "status": "Success",
  "statusCode": "0000",
  "message": "Test.pdf Uploaded succesfully.",
  "info": {
    "createdDate": "2022-06-15 08:03:00",
    "attachDocumentId": 13084258,
    "uploadedBy": "uomuser"
  }
}
```

8.16.5 Search Documents

This API will be used for retrieving attached/unattached/all documents from the required start-end date.

8.16.5.1 Request

8.16.5.1.1 URI

<http://{baseurl}/document/search>

8.16.5.1.2 HTTP Method

POST

8.16.5.1.3 Header

Content-Type: application/json

Authorization: Bearer <token>

8.16.5.1.4 Body

Name	Description
fromDate	Start date from which the user wants to search the documents. This field is required.
toDate	End date until which the user wants to search the documents. This field is required.
attached	<ol style="list-style-type: none"> "Y" value will return the documents attached to order/response/notes within the specified fromDate - toDate. "N" value will return the unattached documents within the specified fromDate - toDate. "ALL" value will return the unattached documents and documents attached to order/response/notes within the specified fromDate - toDate. <p>This field is required.</p>

8.16.5.1.5 Sample Request

```
{
  "fromDate": "06/15/2022",
  "toDate": "06/16/2022",
  "attached": "Y"
}
```

8.16.5.2 Response

8.16.5.2.1 Successful response

```
[
  {
    "attachDocumentId": 13078203,
    "pon": "TST564587DEV361",
    "version": "01",
  }
]
```

```
    "attachedTo": "TP ACCEPT",
    "createdDate": "06/15/2022 12:06:32",
    "category": "Response Attachment",
    "note": "Api R doc Upload Test",
    "documentTitle": "Contract",
    "fileName": "docSectionReq.pdf"
  },
  {
    "attachDocumentId": 13084309,
    "pon": "TST564587DEV361",
    "attachedTo": "Notes",
    "createdDate": "06/15/2022 07:53:29",
    "category": "Note",
    "note": "Test note upload",
    "documentTitle": "Test",
    "fileName": "Test.txt"
  },
  {
    "attachDocumentId": 13084307,
    "pon": "TST7367221302",
    "version": "01",
    "attachedTo": "Order",
    "createdDate": "06/15/2022 07:41:24",
    "category": "Order Attachment",
    "note": "Test doc upload",
    "documentTitle": "Document Title",
    "fileName": "SampleContactBU.xlsx"
  }
}
```

]

8.16.6 Document Attachments Details on Order Notification

When an order is created from the UOC BRANDED/MARKETPLACE having document attached then document section with the attachment(s) details will be included in the order notification generated to the receive customer.

E.g Sample Order Notification

```
{
  "info": {
    ...
  },
  "universalOrder": [
    {
      "sectionName": "Documents Section",
      "fields": [
        {
          "fieldName": "attachDocumentId",
          "value": "13039357"
        },
        {
          "fieldName": "documentTitle",
          "value": "ASR RECV Create Order
Attachment"
        },
        {
          "fieldName": "note",
          "value": "Attach document to order"
        },
        {
          "fieldName": "category",
          "value": "Order Attachment"
        },
        {
          "fieldName": "fileName",
          "value": "cnct.pdf"
        }
      ]
    }
  ]
}
```

```

        }
    ],
    "index": 1
}
...
],
"productOrder": [
...
]
}

```

8.16.7 Document Attachments Details on Response Notification

Document section with the attachment(s) details will be included in the callback notification generated incase of below 2 scenarios:

- When a response is submitted on a send order from UOC SEND with a document attached and callback notification is generated to the send customer.
- When a response is created from UOC RECEIVE and callback notification is generated to the branded customer.

E.g Sample Response Notification

```

{
  "info": {
    ...
  },
  "response": [
    {
      "responseType": "TP ACCEPT",
      "responseOrigin": "CH",
      "sections": [
        {
          "sectionName": "Documents Section",
          "fields": [
            {
              "fieldName":
"attachDocumentId",
              "value": "13049756"
            },
          ],
        }
      ],
    }
  ],
}

```

```

        {
            "fieldName": "documentTitle",
            "value": "Response Attachment"
        },
        {
            "fieldName": "note",
            "value": "Test attachment"
        },
        {
            "fieldName": "category",
            "value": "Response Attachment"
        },
        {
            "fieldName": "fileName",
            "value": "responconf.pdf"
        }
    ],
    "index": 1
}
...
]
}
],
"universalOrder": [
...
],
"productOrder": [
...
]
}

```

8.16.8 Document Attachments Details in GetOrder API response

GetOrder API response will include attached document details if an order contains attached documents along with the order details.

E.g Sample getOrder API response with attached document details

```

{
    "info": {
        ...
    },
    "universalOrder": [
        {

```

```
    "sectionName": "Documents Section",
    "fields": [
      {
        "fieldName": "attachDocumentId",
        "value": "12946554"
      },
      {
        "fieldName": "documentTitle",
        "value": "Contract"
      },
      {
        "fieldName": "note"
      },
      {
        "fieldName": "category",
        "value": "Order Attachment"
      },
      {
        "fieldName": "fileName",
        "value": "Dev_TST_1.pdf"
      }
    ],
    "index": 1,
    "isEnabled": "y"
  },
  ...
],
"productOrder": [
  ...
]
}
```

8.16.9 Download Documents

This API is used for downloading uploaded unattached or attached to order/response documents by passing the attachDocumentId.

8.16.9.1 Request

8.16.9.1.1 URI

<http://{baseurl}/document/attachDocumentID/{attachDocumentID}>

attachDocumentID – uploaded document attachDocumentID value to be passed in the uri for downloading the document.

8.16.9.1.2 HTTP Method

GET

8.16.9.1.3 Header

Authorization: Bearer <token>

8.16.9.2 Response

8.16.9.2.1 Successful Response

API response will return document which can be used as per requirement.

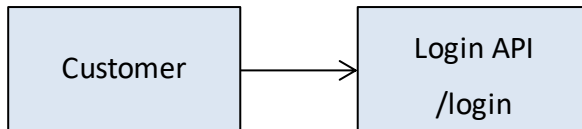

8.16.9.2.2 Failure response

```
{ {
  "status": "failure",
  "statusCode": "1000",
  "errorList": [
    {
      "errorCode": "U1237",
      "description": "Document not found",
      "arguments": null
    }
  ]
}
```

9 Trouble Ticketing Module API Call Flow for a UOC Buyer

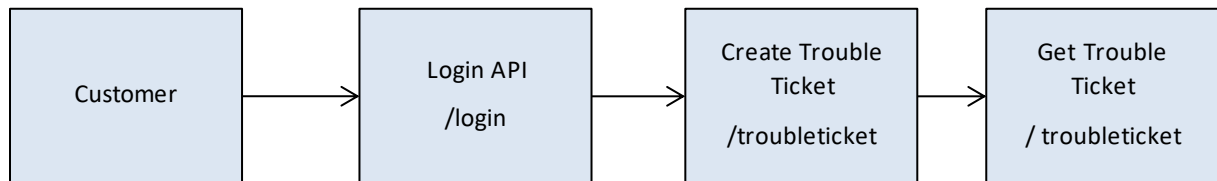

9.1 Login

Use Login API to get access token, this same can be used to in successive calls to as a part of authentication.

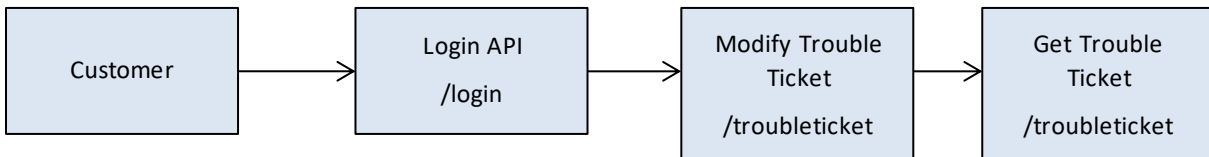

9.2 Create Trouble Ticket

Create Trouble Ticket API used to create Trouble Ticket, for this call security token is required which can be used form login API call.

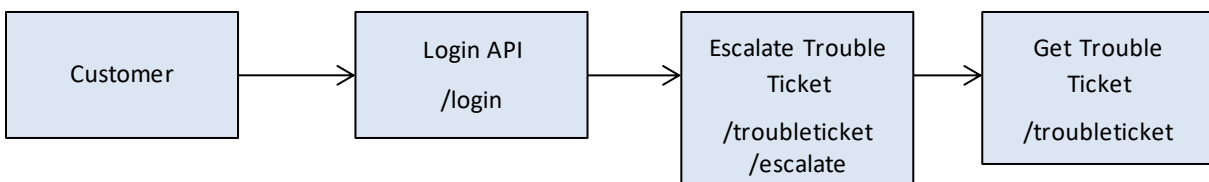

9.3 Modify Trouble Ticket

Modify Trouble Ticket API used to modify Trouble Ticket, for this call security token is required which can be used form login API call.

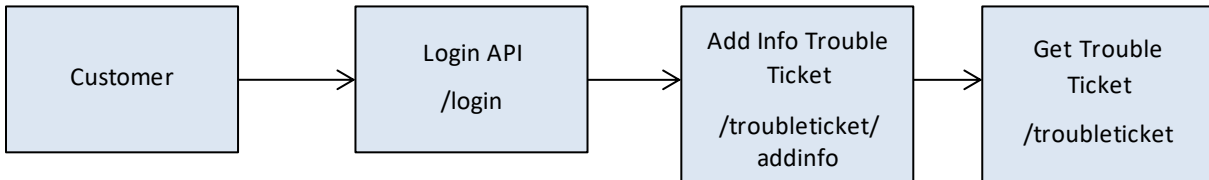

9.4 Escalate Trouble Ticket

Escalate Trouble Ticket API used to Escalate Trouble Ticket, for this call security token is required which can be used form login API call.

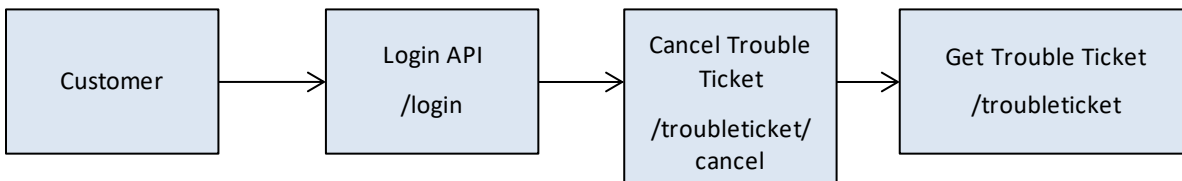

9.5 Add Info Trouble Ticket

Add Info Trouble Ticket API used to add additional info to Trouble Ticket, for this call security token is required which can be used form login API call.

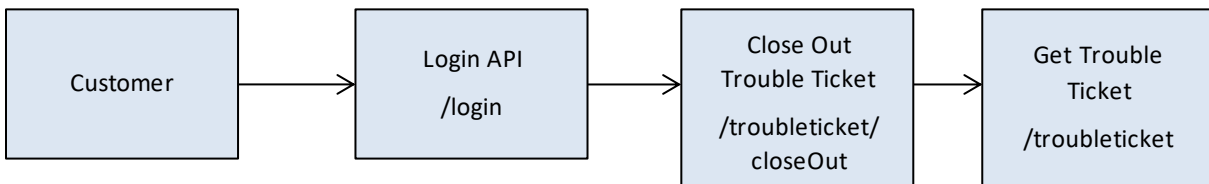

9.6 Cancel Trouble Ticket

Cancel Trouble Ticket API used to cancel Trouble Ticket, for this call security token is required which can be used form login API call.

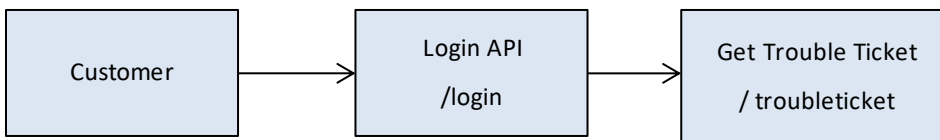

9.7 Close Out Verification Trouble Ticket

Close Out Verification Trouble Ticket API used to send Close Out Verification request for Trouble Ticket, for this call security token is required which can be used form login API call.

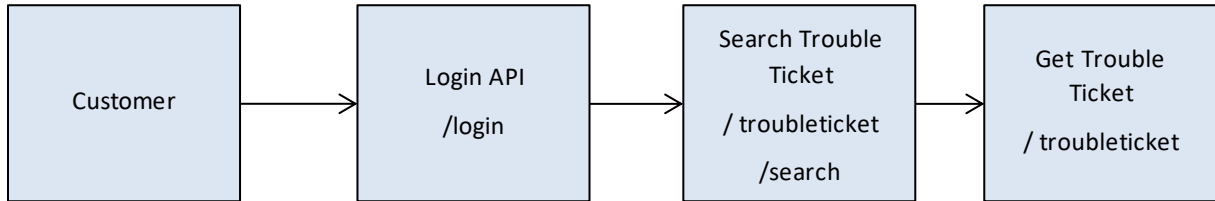

9.8 Get Trouble Ticket

Get Trouble Ticket API used to get Trouble Ticket details, for this call security token is required which can be used form login API call.

9.9 Search Trouble Ticket

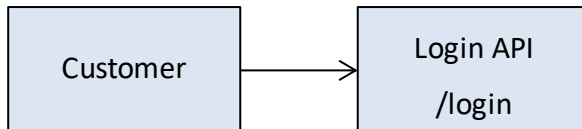

Search Trouble Ticket API used to search Trouble Ticket based on specific search criteria. The output of this API can be used to get details of particular Trouble Ticket.

10 Trouble Ticketing Module API Call Flow for a UOC Seller

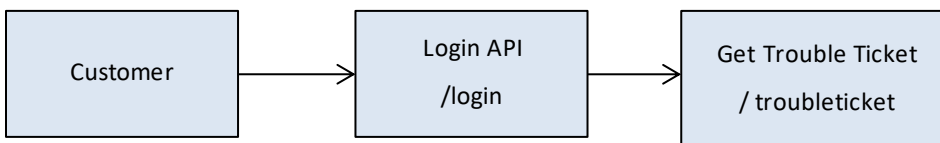

10.1 Login

Use Login API to get access token, this same can be used to in successive calls to as a part of authentication.

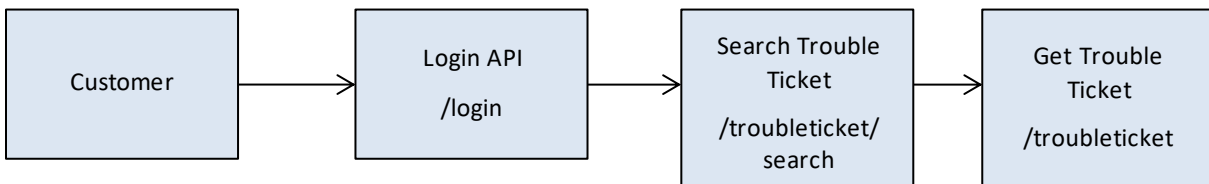

10.2 Get Trouble Ticket

Get Trouble Ticket API used to get Trouble Ticket details, for this call security token is required which can be used from login API call.

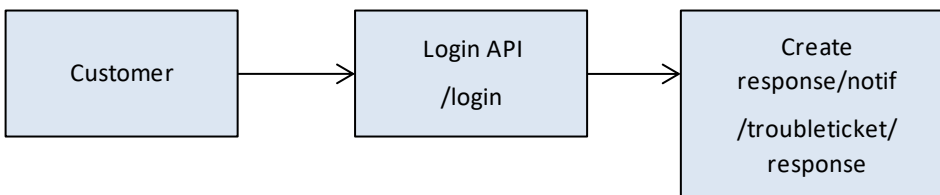

10.3 Search Verification Trouble Ticket

Search Trouble Ticket API used to search Trouble Ticket based on specific search criteria. The output of this API can be used to get details of particular Trouble Ticket.

10.4 Create Response/Notif

Create response/notif API used to create a response/notif for a Trouble Ticket.

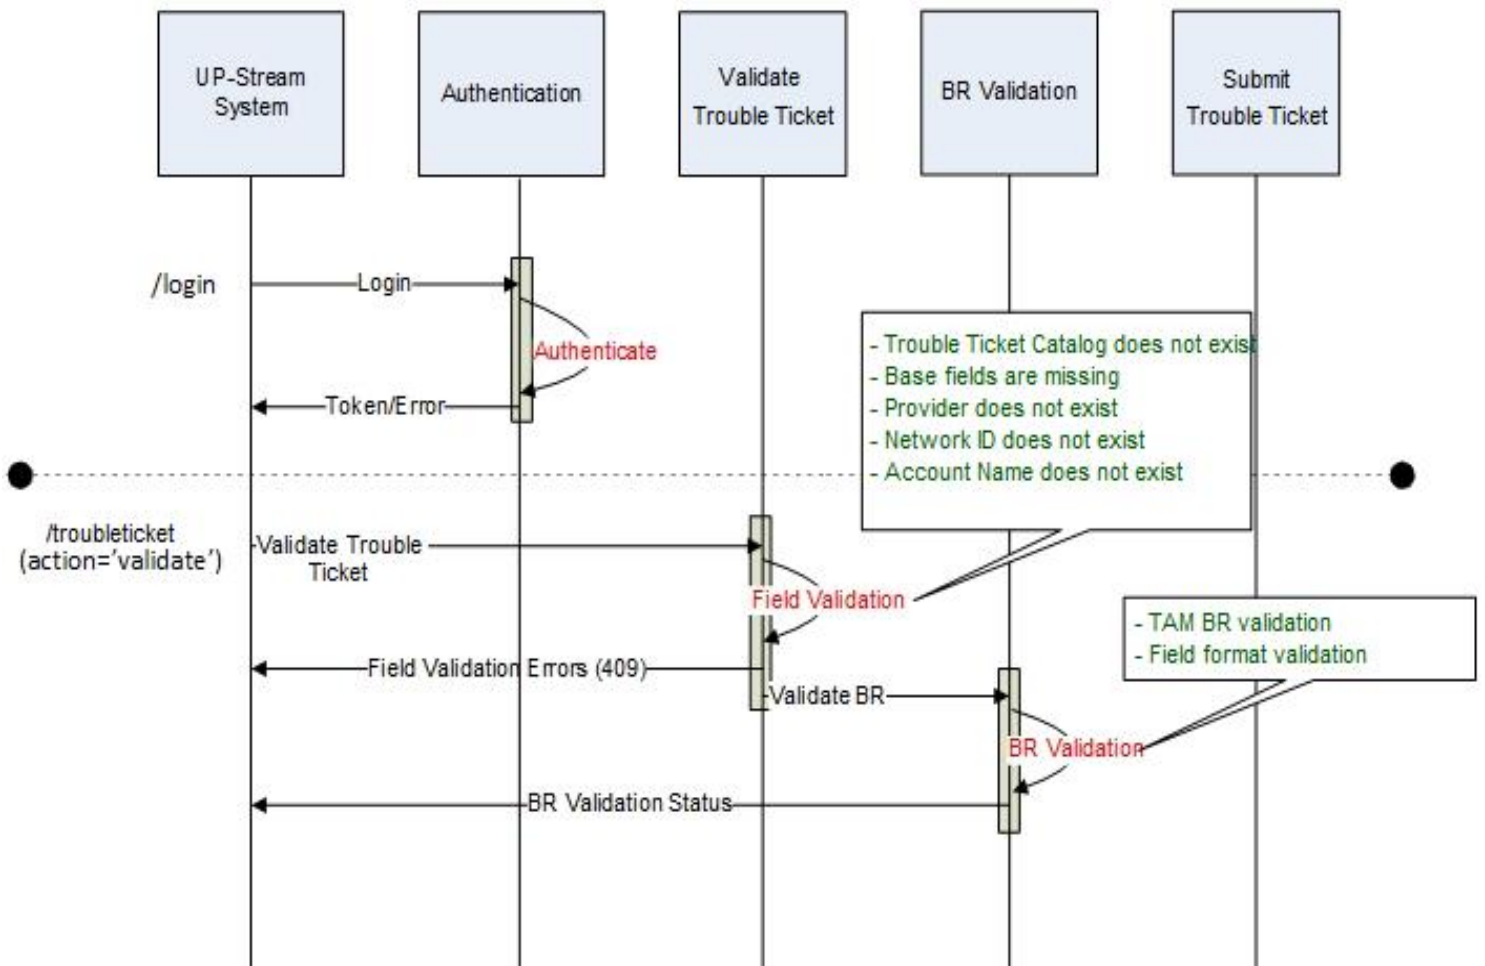

11 Trouble Ticketing Module Sequence Diagram for UOC Buyer

11.1 Validate Trouble Ticket

The following sequence diagram provides the sequence of activities performed during a Validate Trouble Ticket action performed by the User

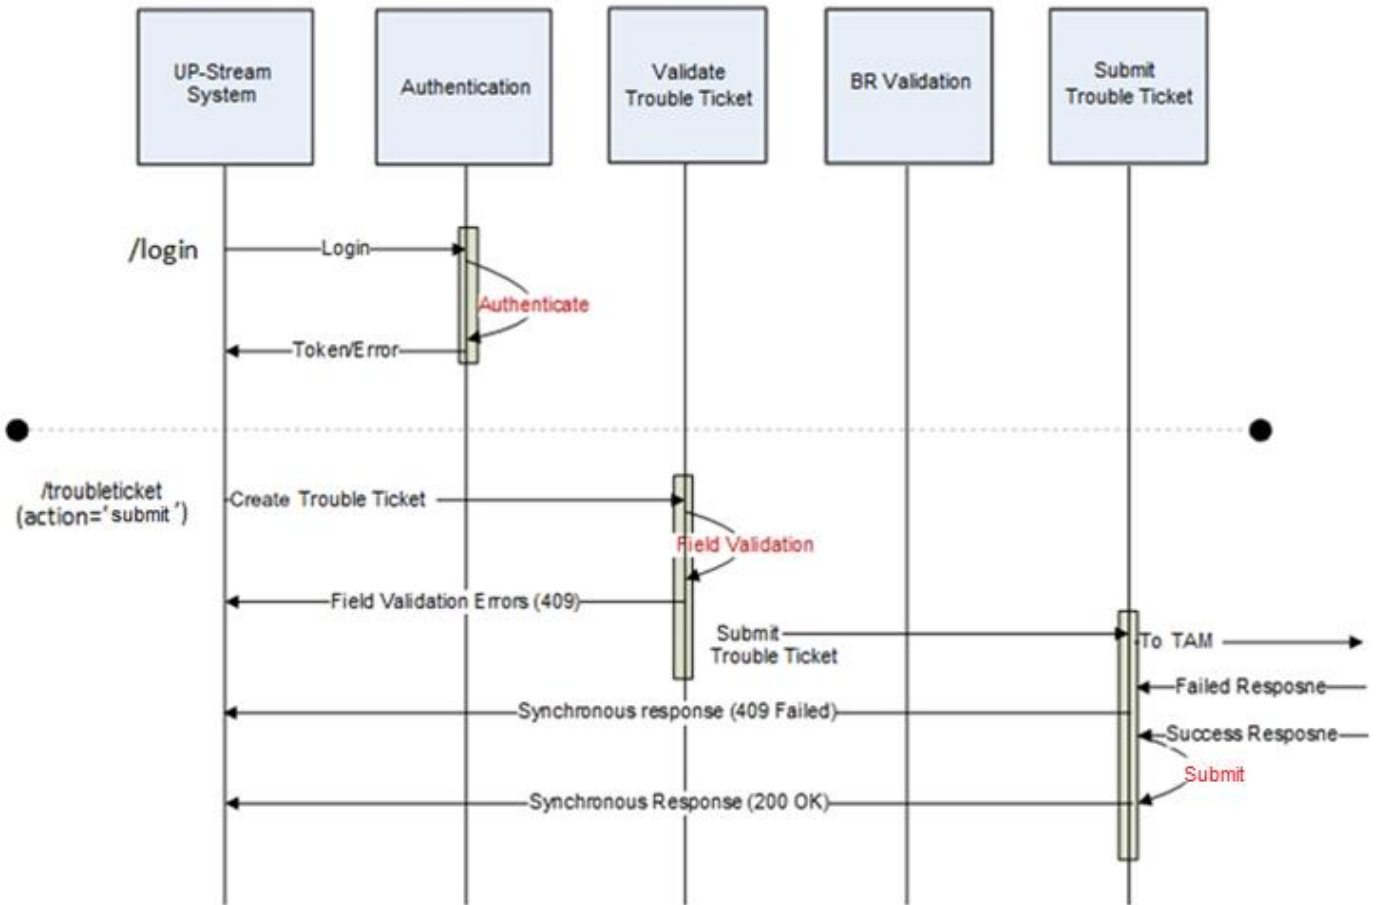

UOM - Validate Trouble Ticket Flow Diagram

11.2 Submit Trouble Ticket

The following sequence diagram provides the sequence of activities performed during a Submit Trouble Ticket action performed by the User

UOM- Submit Trouble Ticket Flow Diagram

12 Trouble Ticketing Module API details for UOC Buyer and Seller

Trouble Ticket Services require you to submit requests directly to the UOC. This chapter provides specific details on sending Service Requests and receiving Service Response messages.

12.1 Services

The Services are single transaction processing requests. They include:

Login

Trouble Ticket

12.2 Login

The login API would be responsible for authenticating the user and returning the access token back to the caller. The returned token must be passed in subsequent requests to UOC in the header. This token is also responsible for identifying the particular customer for each request.

12.2.1 Request:

12.2.2 URL:

<https://{baseurl}/login>

12.2.3 HTTP Method:

12.2.4 POST

12.2.4.1 Header

Accept: application/json

12.2.4.2 Body:

Table 5: Login API Body Parameters

Name	Description
domain	The customer domain that the user belongs to.
username	The login name of the user.
password	The password of the user.

12.2.4.3 Sample Request

```
{
  "domain" : "TEST_E2E",
  "username" : "user1",
  "password" : "passwd"
}
```

12.2.5 Response

The application will respond with the access token upon successful login or an error message for an invalid login.

12.2.5.1 Successful response

Response Code: 200 OK

Token will be returned in response header "Authorization"

12.2.5.2 Failure Response

Response Code: 401 Unauthorized

Response Body:

```
{
  {
    "status" : "failure",
    "statusCode" : "1000",
    "errorList" : [{
      "errorCode" : "<code>",
      "description" : "Invalid Credentials"
    }]
  }
}
```

Subsequent requests to the API will pass this token in the header as shown below.

HTTP Header - Authorization: Bearer <token>

12.3 Trouble Ticket

UOC application will accept the trouble ticket with minimal information from GUI or through API. Trouble tickets are created using the catalogs as templates. These would be transformed before sending to Provider.

12.3.1 Create Trouble Ticket for UOC Buyer

Create Trouble Ticket API is used to create trouble ticket by using catalog as a template.

12.3.1.1 Request

12.3.1.1.1 URI

<https://{baseurl}/troubleticket>

12.3.1.1.2 HTTP Method

POST

12.3.1.1.3 Header

Accept : application/json

Authorization : Bearer <token>

12.3.1.1.4 Body

Name	Description
catalogName	Name of the catalog to use for this trouble ticket.
provider	The trading partner for which the trouble ticket request is submitted.
action	Possible values for Action are (save, submit, validate).
accountName	Account Name associated with Provider
networkId	Network ID associated with Provider
userId	User ID associated with Provider
serviceProfile	Service Profile associated with Provider
troubleTicketRequest[]	Repeating group containing Trouble Ticket section information
troubleTicketRequest [].sectionName	Name of the section
troubleTicketRequest [].fields	Repeating section containing field information
troubleTicketRequest [].fields[].fieldName	This will be the fieldName or guiAliasName from the catalog. guiAliasName is optional
troubleTicketRequest [].fields[].value	The value for the field.
troubleTicketRequest [].subSections[]	Repeating group of sub sections within a section.

12.3.1.1.5 Sample Create Trouble Ticket Template

```
{
  "action": "string",
```

```
"catalogName": "string",
"provider": "String",
"accountName": "String",
"networkId": "string",
"userId": "String",
"serviceProfile": "string",
"troubleTicketRequest": [
  {
    "sectionName": "string",
    "fields": [
      {
        "fieldName": "string",
        "guiAliasName": "string",
        "path": [ "string" ],
        "value": "string"
      }
    ],
    "index": 1,
    "subSections": [
      {
        "sectionName": "string",
        "fields": [
          {
            "fieldName": "string",
            "guiAliasName": "string",
            "path": [ "string" ],
            "value": "string"
          }
        ],
        "index": 1
      }
    ]
  }
]
```

12.3.1.1.6 Sample Create Trouble Ticket Request

```
{
  "catalogName": "SERVICES WITH A PREMISE ADDRESS",
  "provider": "ATT",
  "action": "submit",
  "accountName": "NSRTATTAC",
  "networkId": "NSRTATTNT",
  "userId": "NSRTATT",
```

```
"serviceProfile": "NSRTATTSP",
"troubleTicketRequest": [
  {
    "sectionName": "Base",
    "fields": [
      {
        "fieldName": "TN/Circuit ID",
        "value": "01/GGGG/200717/323/CM/01"
      },
      {
        "fieldName": "Trouble Type",
        "value": "1701"
      },
      {
        "fieldName": "Trouble Ticket Number",
        "value": "TEST9001"
      }
    ],
    "index": 1
  },
  {
    "sectionName": "Trouble Ticket Info",
    "fields": [
      {
        "fieldName": "Detection Time",
        "value": "08-22-2021 05:06"
      },
      {
        "fieldName": "Called Number",
        "value": "223-565-9921"
      },

12.3.1.2 Response

12.3.1.2.1 Successful Response

Body Fields:

Name	Description
status	Status of the API call
message	
statusCode	
info.catalogId	Trouble Ticket Catalog ID
info.application	Application of an Trouble Ticket
info.catalogName	Trouble Ticket Catalog name
info.ttStatus	Trouble Ticket Status
info.ttSubStatus	Trouble Ticket detailed status
info.provider	The trading partner for which the trouble ticket request is submitted.

info.accountName	Account Name associated with Provider
info.networkId	Network ID associated with Provider
info.correlationID	
Info.trackID	
info.userId	User ID associated with Provider
info.serviceProfile	Service Profile associated with Provider
info.troubleTicketNumber	Trouble Ticket Number
info.uocTroubleTicketId	UOC Trouble Ticket Id
info.owner	Owner of a Trouble Ticket
info.requestedClearTime	Requested Clear Time
info.createdDate	Trouble Ticket created date
info.lastUpdated	Last Trouble Ticket update date
info.lastStatusChangeDate	Last Trouble Ticket Status Change Date

Response Code: HTTP 201 OK

Response Body (For action=save, action=submit):

```
{
  "status": "Success",
  "statusCode": "0000",
  "message": "Trouble Ticket: TEST9001 has been successfully
submitted.",
  "info": {
    "catalogName": "SERVICES WITH A PREMISE ADDRESS",
    "catalogId": 557801,
    "trblTktKey": 5414663,

  }
}
```

12.3.1.2.2 Failure Response: Process Errors

Response Code: HTTP 409 Conflict

Response Body:

```
{
  "status": "failure",
  "statusCode": "1000",
  "errorList": [
    {
      "errorCode": "U0015",
      "description": "TN/Circuit ID : is Required field",
      "arguments": [
        "TN/Circuit ID"
      ]
    }, {
      "errorCode": "U0016",
      "description": "Trouble Type : is Required field",
      "arguments": [
        "Trouble Type"
      ]
    }
  ]
}
```

12.3.1.2.3 Failure Response: Input Errors

Response Code: HTTP 400 Bad Request

12.3.2 Modify Trouble Ticket for UOC Buyer

Modify Trouble Ticket API is used to modify trouble ticket which are created in UOC. This API accepts troubleReportId, uocTroubleTicketId and troubleTicketNumber as path.

12.3.2.1 Request

12.3.2.1.1 URI

<https://{baseurl}/troubleticket{id}>

Id – This 'Id' parameter will be decided by 'UpdateBy' Header.

The {id} can be any one of the three parameters - troubleReportId, uocTroubleTicketId, troubleTicketNumber. For example, if the {id} in the URI is a troubleTicketNumber then header value should be "troubleTicketNumber" like wise user has to pass the header value accordingly.

12.3.2.1.2 HTTP Method

POST

12.3.2.1.3 Header

Accept : application/json

Authorization : Bearer <token>

UpdateBy: troubleReportId OR uocTroubleTicketId OR troubleTicketNumber

12.3.2.1.4 Body

Name	Description
catalogName	Name of the catalog to use for this trouble ticket.
provider	The trading partner for which the trouble ticket request is submitted.
action	Possible values for Action are (submit, validate).
accountName	Account Name associated with Provider
networkId	Network ID associated with Provider
userId	User ID associated with Provider
serviceProfile	Service Profile associated with Provider
troubleTicketRequest[]	Repeating group containing Trouble Ticket section information

troubleTicketRequest [].sectionName	Name of the section
troubleTicketRequest [].fields	Repeating section containing field information
troubleTicketRequest [].fields[].fieldName	This will be the fieldName or guiAliasName from the catalog. guiAliasName is optional
troubleTicketRequest [].fields[].value	The value for the field.
troubleTicketRequest [].subSections[]	Repeating group of sub sections within a section.

12.3.2.1.5 Sample Modify Trouble Ticket Request

12.3.3 Escalate Trouble Ticket for UOC Buyer

Escalate Trouble Ticket API is used to escalate trouble ticket which are created in UOC. This API accepts troubleReportId, uocTroubleTicketId and troubleTicketNumber as path.

12.3.3.1 Request

12.3.3.1.1 URI

<https://{baseurl}/troubleticket/escalate/{Id}>

Id – This 'Id' parameter will be decided by 'UpdateBy' Header.

The {id} can be any one of the three parameters - troubleReportId, uocTroubleTicketId, troubleTicketNumber. For example, if the {id} in the URI is a troubleTicketNumber then header value should be "troubleTicketNumber" like wise user has to pass the header value accordingly.

12.3.3.1.2 HTTP Method

POST

12.3.3.1.3 Header

Accept : application/json

Authorization : Bearer <token>

UpdateBy: troubleReportId OR uocTroubleTicketId OR troubleTicketNumber

12.3.3.1.4 Body

Name	Description
catalogName	Name of the catalog to use for this trouble ticket.
provider	The trading partner for which the trouble ticket request is submitted.
action	Possible values for Action are (save, submit, validate).
accountName	Account Name associated with Provider
networkId	Network ID associated with Provider
userId	User ID associated with Provider
serviceProfile	Service Profile associated with Provider
troubleTicketRequest[]	Repeating group containing Trouble Ticket section information
troubleTicketRequest [].sectionName	Name of the section
troubleTicketRequest [].fields	Repeating section containing field information
troubleTicketRequest [].fields[].fieldName	This will be the fieldName or guiAliasName from the catalog. guiAliasName is optional
troubleTicketRequest [].fields[].value	The value for the field.
troubleTicketRequest [].subSections[]	Repeating group of sub sections within a section.

12.3.3.1.5 Sample Escalate Trouble Ticket Request

```
{

12.3.5 Cancel Trouble Ticket for UOC Buyer

Cancel Trouble Ticket API is used to cancel a trouble ticket created in UOC. This API accepts troubleReportId, uocTroubleTicketId and troubleTicketNumber as path.

12.3.5.1 Request

12.3.5.1.1 URI

<https://{baseurl}/troubleticket/cancel/{id}>

Id – This 'Id' parameter will be decided by 'UpdateBy' Header.

The {id} can be any one of the three parameters - troubleReportId, uocTroubleTicketId, troubleTicketNumber. For example, if the {id} in the URI is a troubleTicketNumber then header value should be "troubleTicketNumber" like wise user has to pass the header value accordingly.

12.3.5.1.2 HTTP Method

POST

12.3.5.1.3 Header

Accept : application/json

Authorization : Bearer <token>

UpdateBy: troubleReportId OR uocTroubleTicketId OR troubleTicketNumber

12.3.5.1.4 Body

Name	Description
catalogName	Name of the catalog to use for this trouble ticket.
provider	The trading partner for which the trouble ticket request is submitted.
action	Possible values for Action are (save, submit, validate).
accountName	Account Name associated with Provider
networkId	Network ID associated with Provider
userId	User ID associated with Provider
serviceProfile	Service Profile associated with Provider
troubleTicketRequest[]	Repeating group containing Trouble Ticket section information
troubleTicketRequest [].sectionName	Name of the section
troubleTicketRequest [].fields	Repeating section containing field information
troubleTicketRequest [].fields[].fieldName	This will be the fieldName or guiAliasName from the catalog. guiAliasName is optional
troubleTicketRequest [].fields[].value	The value for the field.
troubleTicketRequest [].subSections[]	Repeating group of sub sections within a section.

12.3.5.1.5 Sample Cancel Trouble Ticket Request

```
{
  "provider": "ATT",
  "action": "submit",
  "accountName": "NSRTATTAC",
  "networkId": "NSRTATTNT",

12.3.6 Close Out Verification Trouble Ticket for UOC Buyer

Close Out Verification Trouble Ticket API is used to Close a cleared trouble ticket which are created in UOC. This API accepts troubleReportId, uocTroubleTicketId and troubleTicketNumber as path.

12.3.6.1 Request

12.3.6.1.1 URI

<https://{baseurl}/troubleticket/closeOut/{id}>

Id – This 'Id' parameter will be decided by 'UpdateBy' Header.

The {id} can be any one of the three parameters - troubleReportId, uocTroubleTicketId, troubleTicketNumber. For example, if the {id} in the URI is a troubleTicketNumber then header value should be "troubleTicketNumber" like wise user has to pass the header value accordingly.

12.3.6.1.2 HTTP Method

POST

12.3.6.1.3 Header

Accept : application/json

Authorization : Bearer <token>

UpdateBy: troubleReportId OR uocTroubleTicketId OR troubleTicketNumber

12.3.6.1.4 Body

Name	Description
catalogName	Name of the catalog to use for this trouble ticket.

provider	The trading partner for which the trouble ticket request is submitted.
action	Possible values for Action are (save, submit, validate).
accountName	Account Name associated with Provider
networkId	Network ID associated with Provider
userId	User ID associated with Provider
serviceProfile	Service Profile associated with Provider
troubleTicketRequest[]	Repeating group containing Trouble Ticket section information
troubleTicketRequest [].sectionName	Name of the section
troubleTicketRequest [].fields	Repeating section containing field information
troubleTicketRequest [].fields[].fieldName	This will be the fieldName or guiAliasName from the catalog. guiAliasName is optional
troubleTicketRequest [].fields[].value	The value for the field.
troubleTicketRequest [].subSections[]	Repeating group of sub sections within a section.

12.3.6.1.5 Sample Close Out Verification - Trouble Ticket Request

```

{
  "provider": "ATT",
  "action": "submit",

12.3.7 Get Trouble Ticket

This API is used to get Trouble Ticket. This API accepts troubleReportId, uocTroubleTicketId and troubleTicketNumber as path.

12.3.7.1 Request

12.3.7.1.1 URI

<https://{baseurl}/troubleticket/{id}>

Id – This 'Id' parameter will be decided by 'GetBy' Header.

The {id} can be any one of the three parameters - troubleReportId, uocTroubleTicketId and troubleTicketNumber. The API calls should pass a header parameter as stated below. For example, if the {id} in the URI is a troubleTicketNumber then header value should be "troubleTicketNumber" like wise user has to pass the header value accordingly.

12.3.7.1.2 HTTP Method

GET

12.3.7.1.3 Header

Accept : application/json

Authorization: Bearer <token>

GetBy: troubleReportId OR uocTroubleTicketId OR troubleTicketNumber

12.3.7.2 Response

12.3.7.2.1 Successful Response

Response Code: HTTP 200 OK

Response Body Fields:

Name	Description
info.catalogId	Trouble Ticket Catalog ID
info.application	Application of the Trouble Ticket
info.catalogName	Trouble Ticket Catalog name
info.ttStatus	Trouble Ticket Status. Refer 12. Appendix – 12.2.7 ttStatus
info.ttSubStatus	Trouble Ticket detailed status
info.provider	The trading partner for which the trouble ticket request is submitted.

info.accountName	Account Name associated with Provider
info.networkId	Network ID associated with Provider
info.correlationID	
Info.trackID	
info.lecUserId	User ID associated with Provider
info.serviceProfile	Service Profile associated with Provider
info.troubleTicketNumber	Trouble Ticket Number
info.uocTroubleTicketId	UOC Trouble Ticket Id
info.owner	Owner of a Trouble Ticket
info.requestedClearTime	Requested Clear Time
info.createdDate	Trouble Ticket created date
info.lastUpdated	Last Trouble Ticket update date
info.lastStatusChangeDate	Last Trouble Ticket Status Change Date
info.troubleTicketRequest[]	Repeating group containing Trouble Ticket section information
info.troubleTicketRequest [].sectionName	Name of the section
info.troubleTicketRequest [].fields	Repeating section containing field information
info.troubleTicketRequest [].fields[].fieldName	This will be the fieldName or guiAliasName from the catalog. guiAliasName is optional
info.troubleTicketRequest [].fields[].value	The value for the field.
info.troubleTicketRequest [].subSections[]	Repeating group of sub sections within a section.

      ]
    }
  ]
}

```

12.3.8 Search Trouble Ticket

This API is used for searching the existing trouble tickets, which are created in UOC. This is a POST request and accepts various parameters. All Parameters are optional.

12.3.8.1 Request

12.3.8.1.1 URI

<https://{baseurl}/troubleticket/search>

12.3.8.1.2 HTTP Method

POST

12.3.8.1.3 Header

Accept : application/json

Authorization : Bearer <token>

12.3.8.1.4 Body

Name	Description
viewType	Supported value for search trouble ticket - "Search"
circuitId	TN/Circuit ID to search.
catalogId	Catalog ID used for trouble ticket creation, multi select possible.
groupedStatus	Custom status group name created
ttStatus	Status of an trouble ticket, multi select possible. Refer 12. Appendix – 12.2.7 ttStatus
troubleTicketFlag	Trouble Ticket flag – custom created in UOC per domain
troubleTicketNo	Trouble Ticket Number to search
provider	The provider for which the trouble ticket is submitted
groupId	groupId to search
troubleReportId	Trouble Report Id to search
troubleType	Trouble Type to search
serviceCharge	Service Charge to search (Yes or No)
uocTroubleTicketId	UOC Trouble Ticket Id to search
customerTicketId	Customer Ticket Id to Search
owner	Owner of the Trouble Ticket.
createStartDate / createEndDate	Create date range : to – from
statusUpdateStartDate / statusUpdateEndDate	Status Update Date : to – from
requestedClearStartDate/requestedClearEndDate	Requested Clear Date : to – from
commitmentClearStartDate/commitmentClearEndDate	Commitment Clear Date : to – from

12.3.8.1.5 Sample Request

12.3.10 Trouble Ticket Notifications to UOC Buyer

Below JSON format will be used to push Trouble Ticket Responses and Notifications to Customers. Customers need to develop a REST service which will accept request in below format.

12.3.10.1 HTTP Method

POST

12.3.10.2 Header

Accept : application/json

12.3.10.3 Body

Name	Description
info.troubleTicketNumber	Trouble Ticket Number
info.troubleReportId	Trouble Report Id
info.uocTroubleTicketId	UOC Trouble Ticket Id
info.troubleTicketKey	Trouble Ticket Key
info.application	Application of the Trouble Ticket
info.owner	Owner of a Trouble Ticket

info.errorDetail	Error Detail
info.ttStatus	Trouble Ticket State
info.ttSubStatus	Trouble Ticket Status
info.requestedClearTime	Requested Clear Time
info.createdDate	Trouble Ticket created date
info.lastUpdated	Last Trouble Ticket update date
info.lastStatusChangeDate	Last Trouble Ticket Status Change Date
info.errorCode	Error Code
info.provider	The trading partner for which the trouble ticket request is submitted.
info.catalogName	Trouble Ticket Catalog name
info.catalogId	Trouble Ticket Catalog Id
info.contactName	Contact Name
info.contactPhone	Contact Phone
info.commitmentTime	Commitment Time
info.tnCircuitId	TN/ Circuit Id
info.accountName	Account Name associated with Provider
info.networkId	Network ID associated with Provider
info.correlationID	Correlation ID
Info.trackID	Track ID
info.lecUserId	User ID associated with Provider
info.serviceCharge	Service Charge
info.closureStatus	Closure Status
info.restoreTime	Restore Time
info.troubleType	Trouble Type

info.troubleTicketRequest[]	Repeating group containing Trouble Ticket section information
info.troubleTicketRequest [].sectionName	Name of the section
info.troubleTicketRequest [].fields	Repeating section containing field information
info.troubleTicketRequest [].fields[].fieldName	This will be the fieldName or guiAliasName from the catalog. guiAliasName is optional
info.troubleTicketRequest [].fields[].value	The value for the field.
info.troubleTicketRequest [].subSections[]	Repeating group of sub sections within a section.
response[].	Group applicable only for Trouble Ticket responses
response[].responseType	This field show type of response for the trouble ticket
response[].sections[].sectionName	Response section name
response[].sections[].fields[].fieldName	Response field name
response[].sections[].fields[].guiAliasName	gui alias name - defined in the response catalog
response[].sections[].fields[].value	Response field value
notification[]	Group applicable only for Trouble Ticket notifications
notification[].notificationType	This field show type of notification for the trouble ticket
notification [].sections[].sectionName	Response section name
notification [].sections[].fields[].fieldName	Response field name
notification [].sections[].fields[].guiAliasName	gui alias name - defined in the response catalog
notification [].sections[].fields[].value	Response field value

12.3.11 Create Trouble Ticket Group (Multiple) for UOC Buyer

Create Trouble Ticket API is used to create trouble ticket by using catalog as a template. This API will support creation of multiple Trouble Ticket from a single API call.

12.3.11.1 Request

12.3.11.1.1 URI

<https://{baseurl}/troubleticket/group>

12.3.11.1.2 HTTP Method

POST

12.3.11.1.3 Header

Accept : application/json

Authorization : Bearer <token>

12.3.11.1.4 Body

Name	Description
action	Possible values for Action are (save, submit, validate).
groupID	Group Id for the Trouble Tickets
troubleTicket[]	Repeating group containing Trouble Ticket Request information
troubleTicket[].catalogName	Name of the catalog to use for this trouble ticket.

troubleTicket[].provider	The trading partner for which the trouble ticket request is submitted.
troubleTicket[].accountName	Account Name associated with Provider
troubleTicket[].networkId	Network ID associated with Provider
troubleTicket[].userId	User ID associated with Provider
troubleTicket[].serviceProfile	Service Profile associated with Provider
troubleTicket[].reuseFromFirst	Flag to reuse payload from the first ticket, Default will be 'Yes. Users need to explicitly set to 'No' if 'reuseFromFirst' is false.
troubleTicket[].troubleTicketRequest[]	Repeating group containing Trouble Ticket section information
troubleTicket[].troubleTicketRequest [].sectionName	Name of the section
troubleTicket[].troubleTicketRequest [].fields	Repeating section containing field information
troubleTicket[].troubleTicketRequest [].fields[].fieldName	This will be the fieldName or guiAliasName from the catalog. guiAliasName is optional
troubleTicket[].troubleTicketRequest [].fields[].value	The value for the field.
troubleTicket[].troubleTicketRequest [].subSections[]	Repeating group of sub sections within a section.

12.3.11.1.5 Sample Create Trouble Ticket Template

```

12.3.11.2 Response

12.3.11.2.1 Successful Response

Body Fields:

Name	Description
troubleTicketResponses[]	Repeating group containing response for individual Trouble Ticket.
troubleTicketResponses[].status	Status of the Individual Trouble Ticket request in API call
troubleTicketResponses[].message	
troubleTicketResponses[].statusCode	
troubleTicketResponses[].info.catalogId	Trouble Ticket Catalog ID
troubleTicketResponses[].info.application	Application of a Trouble Ticket
troubleTicketResponses[].info.catalogName	Trouble Ticket Catalog name
troubleTicketResponses[].info.ttStatus	Trouble Ticket Status
troubleTicketResponses[].info.ttSubStatus	Trouble Ticket detailed status

troubleTicketResponses[].info.provider	The trading partner for which the trouble ticket request is submitted.
troubleTicketResponses[].info.accountName	Account Name associated with Provider
troubleTicketResponses[].info.networkId	Network ID associated with Provider
troubleTicketResponses[].info.correlationID	
troubleTicketResponses[].Info.trackID	
troubleTicketResponses[].info.userId	User ID associated with Provider
troubleTicketResponses[].info.serviceProfile	Service Profile associated with Provider
troubleTicketResponses[].info.troubleTicketNumber	Trouble Ticket Number
troubleTicketResponses[].info.uocTroubleTicketId	UOC Trouble Ticket Id
troubleTicketResponses[].info.owner	Owner of a Trouble Ticket
troubleTicketResponses[].info.requestedClearTime	Requested Clear Time
troubleTicketResponses[].info.createdDate	Trouble Ticket created date
troubleTicketResponses[].info.lastUpdated	Last Trouble Ticket update date
troubleTicketResponses[].info.lastStatusChangeDate	Last Trouble Ticket Status Change Date

Response Code: HTTP 201 OK

Response Body (For action=save, action=submit):

```

12.3.11.2.3 Failure Response: Input Errors

Response Code: HTTP 400 Bad Request

12.3.12 Modify Trouble Ticket Group (Multiple) for UOC Buyer

Modify Trouble Ticket API is used to modify trouble ticket which are created in UOC.

12.3.12.1 Request

12.3.12.1.1 URI

<https://{baseurl}/troubleticket/group>

12.3.12.1.2 HTTP Method

PUT

12.3.12.1.3 Header

Accept : application/json

Authorization : Bearer <token>

12.3.12.1.4 Body

Name	Description
action	Possible values for Action are (submit, validate).
groupID	Group Id for the Trouble Tickets
troubleTicket[]	Repeating group containing Trouble Ticket Request information
troubleTicket[].catalogName	Name of the catalog to use for this trouble ticket.
troubleTicket[].provider	The trading partner for which the trouble ticket request is submitted.
troubleTicket[].accountName	Account Name associated with Provider
troubleTicket[].networkId	Network ID associated with Provider
troubleTicket[].userId	User ID associated with Provider
troubleTicket[].serviceProfile	Service Profile associated with Provider
troubleTicket[].troubleReportId	Key used to identify Trouble Ticket to be modified (First priority)
troubleTicket[].troubleTicketNumber	Key used to identify Trouble Ticket to be modified (Second priority)
troubleTicket[].uocTroubleTicketId	Key used to identify Trouble Ticket to be modified (Third priority)
troubleTicket[].reuseFromFirst	Flag to reuse payload from the first ticket, Default will be 'Yes. Users need to

	explicitly set to 'No' if 'reuseFromFirst' is false.
troubleTicket[].troubleTicketRequest[]	Repeating group containing Trouble Ticket section information
troubleTicket[].troubleTicketRequest[].sectionName	Name of the section
troubleTicket[].troubleTicketRequest[].fields	Repeating section containing field information
troubleTicket[].troubleTicketRequest[].fields[].fieldName	This will be the fieldName or guiAliasName from the catalog. guiAliasName is optional
troubleTicket[].troubleTicketRequest[].fields[].value	The value for the field.
troubleTicket[].troubleTicketRequest[].subSections[]	Repeating group of sub sections within a section.

12.3.12.1.5 Sample Modify Trouble Ticket Request

12.3.12.2 Response

12.3.12.2.1 Successful Response

Body Fields:

Name	Description
troubleTicketResponses[]	Repeating group containing response for individual Trouble Ticket.
troubleTicketResponses[].status	Status of the Individual Trouble Ticket request in API call
troubleTicketResponses[].message	
troubleTicketResponses[].statusCode	
troubleTicketResponses[].info.catalogId	Trouble Ticket Catalog ID
troubleTicketResponses[].info.application	Application of a Trouble Ticket
troubleTicketResponses[].info.catalogName	Trouble Ticket Catalog name
troubleTicketResponses[].info.ttStatus	Trouble Ticket Status
troubleTicketResponses[].info.ttSubStatus	Trouble Ticket detailed status
troubleTicketResponses[].info.provider	The trading partner for which the trouble ticket request is submitted.
troubleTicketResponses[].info.accountName	Account Name associated with Provider
troubleTicketResponses[].info.networkId	Network ID associated with Provider
troubleTicketResponses[].info.correlationID	
troubleTicketResponses[].Info.trackID	
troubleTicketResponses[].info.userId	User ID associated with Provider
troubleTicketResponses[].info.serviceProfile	Service Profile associated with Provider
troubleTicketResponses[].info.troubleTicketNumber	Trouble Ticket Number
troubleTicketResponses[].info.uocTroubleTicketId	UOC Trouble Ticket Id
troubleTicketResponses[].info.owner	Owner of a Trouble Ticket

troubleTicketResponses[].info.requestedClearTime	Requested Clear Time
troubleTicketResponses[].info.createdDate	Trouble Ticket created date
troubleTicketResponses[].info.lastUpdated	Last Trouble Ticket update date
troubleTicketResponses[].info.lastStatusChangeDate	Last Trouble Ticket Status Change Date

Response Code: HTTP 201 OK

12.3.12.2.3 Failure Response: Input Errors

Response Code: HTTP 400 Bad Request

12.3.13 Escalate Trouble Ticket Group (Multiple) for UOC Buyer

Escalate Trouble Ticket API is used to escalate trouble ticket which are created in UOC.

12.3.13.1 Request

12.3.13.1.1 URI

<https://{baseurl}/troubleticket/group/escalate>

12.3.13.1.2 HTTP Method

POST

12.3.13.1.3 Header

Accept : application/json

Authorization : Bearer <token>

12.3.13.1.4 Body

Name	Description
action	Possible values for Action are (submit, validate).
troubleTicket[]	Repeating group containing Trouble Ticket Request information
troubleTicket[].catalogName	Name of the catalog to use for this trouble ticket.
troubleTicket[].provider	The trading partner for which the trouble ticket request is submitted.
troubleTicket[].accountName	Account Name associated with Provider

troubleTicket[].networkId	Network ID associated with Provider
troubleTicket[].userId	User ID associated with Provider
troubleTicket[].serviceProfile	Service Profile associated with Provider
troubleTicket[].troubleReportId	Key used to identify Trouble Ticket to be modified (First priority)
troubleTicket[].troubleTicketNumber	Key used to identify Trouble Ticket to be modified (Second priority)
troubleTicket[].uocTroubleTicketId	Key used to identify Trouble Ticket to be modified (Third priority)
troubleTicket[].reuseFromFirst	Flag to reuse payload from the first ticket, Default will be 'Yes. Users need to explicitly set to 'No' if 'reuseFromFirst' is false.
troubleTicket[].troubleTicketRequest[]	Repeating group containing Trouble Ticket section information
troubleTicket[].troubleTicketRequest[].sectionName	Name of the section
troubleTicket[].troubleTicketRequest[].fields	Repeating section containing field information
troubleTicket[].troubleTicketRequest[].fields[].fieldName	This will be the fieldName or guiAliasName from the catalog. guiAliasName is optional
troubleTicket[].troubleTicketRequest[].fields[].value	The value for the field.
troubleTicket[].troubleTicketRequest[].subSections[]	Repeating group of sub sections within a section.

12.3.15.2 Response

12.3.15.2.1 Successful Response

Body Fields:

Name	Description
troubleTicketResponses[]	Repeating group containing response for individual Trouble Ticket.
troubleTicketResponses[].status	Status of the Individual Trouble Ticket request in API call
troubleTicketResponses[].message	
troubleTicketResponses[].statusCode	
troubleTicketResponses[].info.catalogId	Trouble Ticket Catalog ID
troubleTicketResponses[].info.application	Application of a Trouble Ticket
troubleTicketResponses[].info.catalogName	Trouble Ticket Catalog name
troubleTicketResponses[].info.ttStatus	Trouble Ticket Status
troubleTicketResponses[].info.ttSubStatus	Trouble Ticket detailed status
troubleTicketResponses[].info.provider	The trading partner for which the trouble ticket request is submitted.
troubleTicketResponses[].info.accountName	Account Name associated with Provider
troubleTicketResponses[].info.networkId	Network ID associated with Provider
troubleTicketResponses[].info.correlationID	
troubleTicketResponses[].Info.trackID	
troubleTicketResponses[].info.userId	User ID associated with Provider
troubleTicketResponses[].info.serviceProfile	Service Profile associated with Provider

troubleTicketResponses[].info.troubleTicketNumber	Trouble Ticket Number
troubleTicketResponses[].info.uocTroubleTicketId	UOC Trouble Ticket Id
troubleTicketResponses[].info.owner	Owner of a Trouble Ticket
troubleTicketResponses[].info.requestedClearTime	Requested Clear Time
troubleTicketResponses[].info.createdDate	Trouble Ticket created date
troubleTicketResponses[].info.lastUpdated	Last Trouble Ticket update date
troubleTicketResponses[].info.lastStatusChangeDate	Last Trouble Ticket Status Change Date

Response Code: HTTP 201 OK

12.3.16.2.3 Failure Response: Input Errors

Response Code: HTTP 400 Bad Request

12.3.17 Create Trouble Ticket Response for UOC Seller

Create Trouble Ticket response API is used to create response for a trouble ticket by using catalog as a template.

12.3.17.1 Request

12.3.17.1.1 URI

<https://{baseurl}/troubleticket/response/{id}>

Id – This 'Id' parameter will be decided by 'UpdateBy' Header.

The {id} can be any one of the three parameters - troubleReportId, uocTroubleTicketId, troubleTicketNumber. For example, if the {id} in the URI is a troubleTicketNumber then header value should be "troubleTicketNumber" like wise user has to pass the header value accordingly.

12.3.17.1.2 HTTP Method

POST

12.3.17.1.3 Header

Accept : application/json

Authorization : Bearer <token>

UpdateBy: troubleReportId OR uocTroubleTicketId OR troubleTicketNumber

12.3.17.1.4 Body

Name	Description
responseCatalogName	Name of the catalog to use for this trouble ticket response.
tradingPartner	The trading partner for which the trouble ticket response is submitted.
action	Possible values for Action are (submit, validate).
response[]	Repeating group containing Trouble Ticket Response section information
response[].sectionName	Name of the section
response[].fields	Repeating section containing field information
response[].fields[].fieldName	This will be the fieldName or guiAliasName from the catalog. guiAliasName is optional
response[].fields[].value	The value for the field.

12.3.17.1.5 Sample TP ACCEPT Response

```
{
  "action": "submit",
  "responseCatalogName": "TROUBLE TICKET CREATE SUCCESS",
  "response": [
    {
      "sections": [
        {
          "sectionName": "Create Trouble Ticket Success Section",
          "fields": [
            {
              "fieldName": "Network Id",
              "value": "WAVE"
            },
            {

13 Serviceability/Quote Services

13.1 Services

The Services are single transaction processing requests. They include:

Login

SA/Quote

13.2 Login

The login API would be responsible for authenticating the user and returning the access token back to the caller. The returned token must be passed in subsequent requests to UOC in the header. This token is also responsible for identifying the particular customer for each request.

13.2.1 Request:

13.2.1.1 URL:

<https://{baseurl}/login>

13.2.1.2 HTTP Method:

POST

13.2.1.3 Header

Accept: application/json

13.2.1.4 Body:

Table 5: Login API Body Parameters

Name	Description
domain	The customer domain that the user belongs to.
username	The login name of the user.
password	The password of the user.

13.2.1.5 Sample Request

```
{
  "domain" : "TEST_E2E",
  "username" : "user1",
  "password" : "passwd"
}
```

13.2.2 Response

The application will respond with the access token upon successful login or an error message for an invalid login.

13.2.2.1 Successful response

Response Code: 200 OK

Token will be returned in response header "Authorization"

13.2.2.2 Failure Response

Response Code: 401 Unauthorized

Response Body:

```
{
  {
    "status" : "failure",
    "statusCode" : "1000",
    "errorList" : [{
      "errorCode" : "<code>",
      "description" : "Invalid Credentials"
    }]
  }
}
```

Subsequent requests to the API will pass this token in the header as shown below.

HTTP Header - Authorization: Bearer <token>

13.3 Create Serviceability/Quote Request (Buyer)

UOC application will accept the Serviceability/Quote requests with minimal information from GUI or through API. Serviceability/Quote requests are created using Catalog as templates. These would be submitted by Buyer.

13.3.1 Serviceability/Quote Request

Create Serviceability/Quote API is used to create Serviceability request using Catalog as template.

13.3.1.1 URI

<https://{baseurl}/saquote>

13.3.1.2 HTTP Method

POST

13.3.1.3 Header

Accept : application/json

Authorization : Bearer <token>

13.3.1.4 Body

Name	Description
catalogName	Name of the catalog to use for serviceability request. For Quote request the value should be "QUOTE". For quote request the value should be "SERVICEABILITY".
action	Possible values for Action are (submit, validate).
requestType	Possible values for requestType are (SERVICEABILITY, QUOTE). To identify quote request the value should be "QUOTE". To identify serviceability request the value should be "SERVICEABILITY".
SAQUOTEREQUEST []	Contains serviceability request section which is not repeatable.
SAQUOTEREQUEST [].sectionName	Name of the section
SAQUOTEREQUEST [].fields	Contains field information.
SAQUOTEREQUEST [].fields[].fieldName	This will be the fieldName from the catalog.
SAQUOTEREQUEST [].fields[].value	The value for the field.
SAQUOTEREQUEST [].subSections[]	Repeating group of sub sections within a section.

13.3.1.5 Sample Create Serviceability/Quote Request Template

```
{
  "catalogName": "string",

13.3.2 Sample Sync Response

13.3.2.1 Sample Serviceability Request Sync Ack Response

Body Fields:

Name	Description
status	Status of the API call
message	

statusCode	
info.saQuoteRequestKey	Serviceability request key
info.status	Serviceability request status
info.requestType	Serviceability request identifier
info.application	Serviceability/Quote Application identifier
info.userKey	User used to submit Serviceability request
info.createdDate	Serviceability request created date
info.buyerSaQuoteID	Serviceability request buyerSaQuoteID
info.uocSaQuoteId	uocSaQuoteId is associated with the Serviceability request and response transaction
info.customerId	customerId from which Serviceability request is submitted
Info.endUser	Serviceability request end user
info.endUserId	Serviceability request end user id

Response Code: HTTP 200 OK

Response Body (For action=save, action=submit):

```
{
  "status": "Success",
  "statusCode": "0000",
  "info": {
    "saQuoteRequestKey": 176004,
    "status": "RECEIVED",
    "requestType": "SERVICEABILITY",
    "application": "SAQUOTE",
    "userKey": "example",
    "createdDate": "2022-02-24 07:51:47.944",
```

```

    "buyerSaQuoteID": "SA0663",
    "uocSaQuoteId": "MYXPSA00000843",
    "customerId": "MYX_PROD",
    "endUser": "KANYE WEST",
    "endUserId": "NSEUMYX_983",
    "warning": [
      {
        "message": "",
        "arguments": [
          ]
        }
      ]
    ]
  }

```

13.3.2.2 Sample Quote Request Sync Response

Body Fields:

Name	Description
status	Status of the API call
message	
statusCode	
info.saQuoteRequestKey	Quote request key
info.status	Quote request status
info.requestType	Quote request identifier
info.application	Srviceability/Quote Application identifier
info.userKey	User used to submit Quote request
info.createdDate	Quote request created date
info.buyerSaQuoteID	Quote buyerSaQuoteID

info.uocSaQuoteId	uocSaQuoteId is associated with the Serviceability request and response transaction
info.customerId	customerId from which Quote request is submitted
Info.endUser	Quote request end user
info.endUserId	Quote request end user id

Response Code: HTTP 200 OK

Response Body (For action=save, action=submit):

```
{
  "status": "Success",
  "statusCode": "0000",
  "info": {
    "saQuoteRequestKey": 176004,

13.3.3.2 Quote Response Notification

Body Fields:

Name	Description
info.saQuoteRequestKey	Quote request key

info.status	Quote request status
info.requestType	Quote request identifier
info.application	Serviceability/Quote Application identifier
info.userKey	User used to submit Quote request
info.createdDate	Quote request created date
info.buyerSaQuoteID	Quote request buyerSaQuoteID
info.sellerSaQuoteID	Quote response sellerSaQuoteID
info.uocSaQuoteId	uocSaQuoteId is associated with the Quote request and response transaction
info.customerId	customerId from which Quote response is submitted
Info.endUser	Quote request end user
info.endUserId	Quote request end user id
SAQUOTERESPONSE []	Contains Quote response details.
SAQUOTEREQUEST []	Contains Quote request details.

13.4.3 Synchronous Response (Seller)

Seller will send synchronous response to request sent by UOC. UOC will accept three types of response –

- Acknowledgement Response
- Serviceability/Quote Response
- Failure Response

13.4.3.1 Sample Acknowledgement Response

```
{
  "status": "Success",
  "statusCode": "0000",
  "message": "Request accepted successfully"
}
```

13.4.3.2 Sample Synchronous Serviceability Response

```
{
```

```
"status": "Success",
"statusCode": "0000",
"message": "Request processed successfully",
"buyerSAQuoteId": "SA0663",
"catalogName": "SERVICEABILITY RESPONSE",
"uocSAQuoteId": "MYXPSA00000843",
"SAQUOTERESPONSE": [
  {
    "sectionName": "Serviceability Response",
    "index": 1,
    "fields": [
      {
        "fieldName": "Address ID",
        "value": "NSSI984"
      },
      {
        "fieldName": "Site Address",
        "value": "720 BAKER ST, SILVERTHORNE, NY
452001"
      },
      {
        "fieldName": "Provider (Seller)",
        "value": "TWC_PROD"
      },
      {
        "fieldName": "Serviceability ID",
        "value": "S3323"
      },
      {
```

```
        "fieldName": "SA Status",
        "value": "OFF-NET"
    },
    {
        "fieldName": "SA Rating",
        "value": "ORANGE"
    },
    {
        "fieldName": "Product",
        "value": "ETHERNET - SWITCHED"
    },
    {
        "fieldName": "Product Name",
        "value": "DEDICATED INTERNET"
    },
    {
        "fieldName": "Speed",
        "value": "50 MBPS"
    },
    {
        "fieldName": "Media Type",
        "value": "FIBER"
    }
    ]
}
]
```

13.4.3.3 Sample Synchronous Quote Response

```
{
  "status": "Success",
  "statusCode": "0000",
  "message": "Request processed successfully",
  "buyerSAQuoteId": "Q0663",
  "catalogName": "QUOTE RESPONSE",
  "uocSAQuoteId": "MYXPSA00000843",
  "SAQUOTERESPONSE": [
    {
      "sectionName": "Quote Response",
      "index": 1,
      "fields": [
        {
          "fieldName": "Address ID",
          "value": "NSSI1642"
        },
        {
          "fieldName": "Site Address",
          "value": "QA PRD TST ADD LINE, PRDTSTCITY, PR 2132"
        },
        {
          "fieldName": "Provider (Seller)",
          "value": "TWC_PROD"
        },
        {
          "fieldName": "Seller ID",
          "value": "SEID11"
        },
        {
          "fieldName": "Quote ID",
```

```
    "value": ""
  },
  {
    "fieldName": "Quote Number",
    "value": "1123"
  },
  {
    "fieldName": "Product",
    "value": "CLOUD CONNECT"
  },
  {
    "fieldName": "Product Name",
    "value": ""
  },
  {
    "fieldName": "Speed",
    "value": "10 MBPS"
  },
  {
    "fieldName": "Media Type",
    "value": "MEDIA11"
  },
  {
    "fieldName": "Term",
    "value": "12 MONTHS"
  },
  {
    "fieldName": "Price (MRC)",
    "value": "100"
  },
  {
```

```
        "fieldName": "Price (NRC)",
        "value": "200"
    },
    {
        "fieldName": "SA Status",
        "value": "ON-NET"
    },
    {
        "fieldName": "SA Rating",
        "value": "GREEN"
    }
]
}
]
```

13.4.3.4 Sample Synchronous Failure Response

```
{
  "status": "Failure",
  "statusCode": "1000",
  "errorList": [
    {
      "errorCode": "U0015",
      "description": "Provider (Seller) is Required field.",
      "arguments": null
    }
  ]
}
```

13.4.4 Asynchronous Serviceability/Quote Response

UOC application will accept the Serviceability/Quote response from GUI or through API from the Seller/Provider. Serviceability/Quote responses are created using Catalog as template. These would be sent by Seller/Provider.

13.4.4.1 Serviceability/Quote Response

Create Serviceability/Quote response API is used to create Serviceability response using Catalog as template.

13.4.4.2 URI

<https://{baseurl}/saquote/response>

13.4.4.3 HTTP Method

POST

13.4.4.4 Header

Accept : application/json

Authorization : Bearer <token>

13.4.4.5 Body

Name	Description
catalogName	Name of the catalog to use for serviceability response.
action	Possible values for Action is (submit).
buyerSAQuoteId	Serviceability request buyerSaQuoteID
uocSAQuoteId	uocSaQuoteId is associated with the Serviceability request and response transaction
SAQUOTERESPONSE []	Repeating group containing Serviceability response section information
SAQUOTERESPONSE [].sectionName	Name of the section
SAQUOTERESPONSE [].fields	Contains field information.
SAQUOTERESPONSE [].fields[].fieldName	This will be the fieldName from the catalog.
SAQUOTERESPONSE [].fields[].value	The value for the field.

13.4.4.6 Sample Create Serviceability/Quote Response Template

```
{
  "buyerSAQuoteId": "string",
  "catalogName": "string",
  "action": "string",
  "uocSAQuoteId": "string",
  "SAQUOTERESPONSE": [
    {
      "sectionName": "string",

13.5 Search Serviceability/Quote

This API is used for searching the existing serviceability or quote request, which are created in UOC. This is a POST request and accepts various parameters.

13.5.1 Request

13.5.1.1 URI

<https://{baseurl}/saquote/search>

13.5.1.2 HTTP Method

POST

13.5.1.3 Header

13.5.2 Accept : application/json

13.5.3 Authorization : Bearer <token>

13.5.3.1 Body

Name	Description
uocSAQuoteId	UOC Serviceability/Quote Request Number to search.
buyerGroupSAQuoteId	Buyer Group Serviceability/ Quote Number
buyerSAQuoteId	Buyer Serviceability/Quote Number
sellerSAQuoteId	Seller Serviceability/Quote Number
endUser	End user of serviceability/Quote request
city	City
state	State
zip	Zip
product	Product to search, multi select possible.
createDateFrom/ createDateTo	Created date range : to – from
projectName	Project name to search
provider	The provider for which the request is submitted, multi select possible.

13.5.3.2 Sample Request

```
{
  "uocSAQuoteId": "UOCSAQUOTEID",
  "buyerGroupSAQuoteId": "BUYERGROUPSAQUOTEID",
  "buyerSAQuoteId": "BUYERSAQUOTEID",
  "sellerSAQuoteId": "SELLERSAQUOTEID",
  "saQuoteStatus": ["PROVIDED"],
  "endUser": "EU6423",
  "city": "CITY",
  "state": "STATE",
  "zip": "ZIP",
  "product": [
    "Broadband Internet"
  ],
}
```

```
"createDateFrom": "04/03/2022",
"createDateTo": "04/01/2022",
"projectName": "PROJECT NAME",
"provider": [
  "COX COMMUNICATIONS"
]
}
```

13.5.4 Resposne

13.5.4.1 Successful response

```
{
  "searchResults": [
    {

}
```

13.6 Get Serviceability/Quote

This API is used to get serviceability/quote details for particular buyer SA/Quote Id and seller SA/Quote Id. This is a HTTP GET request.

13.6.1 Request

13.6.1.1 URI

<https://{baseurl}/saquote/{id}>

Id – This 'Id' parameter will be decided by 'GetBy' Header.

The {id} can be any one of the two parameters - buyerSAQuoteId, and sellerSAQuoteId. For example, if the {id} in the URI is a buyerSAQuoteId then header value should be "buyerSAQuoteId" like wise user has to pass the header value accordingly.

13.6.1.2 HTTP Method

GET

13.6.1.3 Header

Accept : application/json

Authorization: Bearer <token>

GetBy: buyerSAQuoteId OR sellerSAQuoteId

13.6.2 Response

13.6.2.1 Successful Response

Response Code: HTTP 200 OK

Response Body Fields:

Name	Description
info.saQuoteRequestKey	Serviceability request key
info.status	Serviceability request status
info.requestType	Serviceability request identifier
info.application	Serviceability/Quote Application identifier
info.userKey	User used to submit Serviceability request
info.createdDate	Serviceability request created date
info.buyerSaQuoteID	Serviceability request buyerSaQuoteID
info.sellerSaQuoteID	Serviceability response sellerSaQuoteID

info.uocSaQuoteId	uocSaQuoteId is associated with the Serviceability request and response transaction
info.customerId	customerId from which Serviceability response is submitted
Info.endUser	Serviceability request end user
info.endUserId	Serviceability request end user id
SAQUOTEREQUEST []	Contains serviceability response details.
SAQUOTERESPONSE []	Contains serviceability request details.

Response Body:

13.6.2.3 Failure Response

Response Code: HTTP 404 Not Found

Response Body:

```

{
  "status" : "failure",
  "statusCode" : "1000",
  "errorList" : [{
    "errorCode" : "<code>",
    "description" : "Serviceability/Quote Request not
found for given Buyer SA/Quote ID or Seller SA/Quote ID"
  }]
}

```

13.7 Quote to Order Request (Buyer)

UOC application will accept the Quote to Order through API.

13.7.1 Quote to Order Request

Create Quote to Order API is used to create request.

13.7.1.1 URI

<https://{baseurl}/quotetoorder>

13.7.1.2 HTTP Method

POST

13.7.1.3 Header

Accept : application/json

Authorization : Bearer <token>

13.7.1.4 Body

Name	Description
action	Possible values are "submit". Note: In future additional values will be added
requestType	Possible values are "QUOTETOORDER". Note: In future additional values will be added
groupID	Group ID for the request submitted in payload
quoteToOrder []	Contains quote requests.
quoteToOrder [].quoteToOrderRequest []	Contains quote request section and fields. This can be repeated for multiple request
quoteToOrder [].quoteToOrderRequest [].fields	Contains field information.
quoteToOrder [].quoteToOrderRequest [].fields[].fieldName	This will be the fieldName.
quoteToOrder [].quoteToOrderRequest [].fields[].value	The value for the field.

quoteToOrder [].quoteToOrderRequest [].sectionName	Name of the section
quoteToOrder [].quoteToOrderRequest [].subSections[]	Repeating group of sub sections within a section.

13.7.1.5 Sample Create Quote to Order Request Template

```

{
  "action": "submit ",
  "requestType": "QUOTETOORDER",
  "groupID": "string"
  "quoteToOrder": [
    {
      "quoteToOrderRequest": [
        {
          "sectionName": "string",
          "index": 1,
          "fields": [
            {
              "fieldName": "string",
              "value": "string"
            }
          ],
          "subSections": [
            {
              "sectionName": "string",
              "index": 1,

13.7.1.7 Response

13.7.1.7.1 Successful Response

Response Code: HTTP 200 OK

Response Body fields:

Name	Description
Response[]	Contains response (s).
Response[].status	Status of the API call
Response[].message	
Response[].statusCode	Status code (please refer attached excel sheet with details in section 7.5)
Response[].info.transactionId	transactionId from request.
Response[].info.application	Application of an order
Response[].info.universalCatalogName	Universal Catalog name
Response[].info.productCatalogName	Product catalog name
Response[].info.buyerOrderID, info.uocOrderID	Customer generated and user generated order id
Response[].info.orderStatus	Status of an order (please refer attached excel sheet in section 7.5)
Response[].info.requestNumber	Purchase order Number (PON)
Response[].info.buyerVersion	Order version
Response[].info.activityType	Order activity (Please refer attached excel sheet in section 7.5)

Response[].Info.supplementType	Supplement type of an order – refer appendix for possible values for this field
Response[].info.activityId	Id of the order activity
Response[].info.tradingPartner	Trading partner – to which order will be submitted
Response[].info.sellerID	ICSC – seller id of an order
Response[].info.buyerID	CCNA – buyer id of an order
Response[].info.project	Project of an order
Response[].Info.endUser and info.endUserAddress	endUser and endUserAddress for order created
Response[].info.owner	Owner of an order
Response[].info.createdDate	Order created date
Response[].info.lastUpdated	Last order update date
Additional info block attributes	Refer section : 9.2.6 Additional Info block attributes
Additional info block attributes	Refer section : 9.2.6 Additional Info block attributes

Response Code: HTTP 201 OK

13.7.1.7.2 Failure Response: Process Errors

Response Code: HTTP 409 Conflict

Response Body:

The response body will contain a list of validation errors and status as failure.

Possible error examples:

- Base fields are missing
- Trading Partner does not exist
- Buyer SA/Quote ID is Required field

```
{
  "Response": [
    {
      "status": "failure",
      "statusCode": "<CODE>",
      "id": 20640317,
      "errorList": [
        {
          "errorCode": "U0002",
```

```

    "description": " Trading Partner does not exist",
    "arguments": [
      "CVN Communication"
    ]
  }
]
}
]
}
]
}

```
