R. INTEGRATED SERVICES DIGITAL NETWORK (ISDN)

1. BASIC RATE INTERFACE (BRI) (Business Only) <sup>(1)</sup> <sup>(2)</sup>

(C)

A. General

1. Integrated Services Digital Network - Basic Rate Interface (ISDN-BRI) is a local exchange telecommunications service that provides integrated voice and data communications capability. ISDN-BRI service supports the simultaneous transmission of voice and data over a single exchange access line.

ISDN-BRI provides a customer two B-channels with transmission speeds up to 64 Kbps each and one 16 Kbps D-channel. The service provides switched communication paths providing end user access to a variety of network services and features including data, voice and video, which conforms to internationally developed, published and recognized standards generated by the International Telecommunications Union.

2. Service Capabilities

- (a) ISDN-BRI consists of three distinct channels delivered to the customer's premise: two B (bearer) channels and one D (delta) channel. This is also known as 2B+D. ISDN-BRI is not available in other channel configurations of 1B+D or 0B+D.
- (b) The B-channel carries voice and/or data communications at speeds up to 64 Kbps, from the customer's premise, over the loop facility, to the central office. Packet data services are not available over the B-channel.
- (c) The D-channel carries administrative signaling at 16 Kbps for call-control for either a voice or data B-channel call on the ISDN-BRI line. The D-channel does not have voice capability. Packet data services are not available on the D-channel.
- (d) Customers subscribing to ISDN-BRI must comply with ISDN Basic Rate Network Interface specifications as specified by the Company. The ISDN Basic Rate Interface is comprised of a limited set of standard user-network interfaces. The BRI customer premises equipment (CPE) located at the customer premises must be compatible with the network interface. This interface is defined as follows:

A two-wire interface is the physical interface between a central office switch equipped with ISDN and the customer premises equipment which is necessary for terminating a telephone circuit or facility at the customer premises.

<sup>(1)</sup> Effective July 30, 2008, ISDN-BRI is grandfathered for residential subscribers. See Section 24 of Telephone - Pa. P.U.C. No. 26.

## Rate Increases for Our Wholesale Customers with TDM Services

Dear Valued Business Customer,

At Brightspeed, we prioritize meeting your current and future needs. We're committed to supporting our Direct Signal 0 (DS0), Direct Signal 1 (DS1), and Direct Signal 3 (DS3) products, the cornerstone TDM (Time Division Multiplexing) services that deliver the essential digital communications you depend on. As you know, the rates for these services have not been adjusted since before Brightspeed became your provider in October 2022. However, to continue delivering quality service, we recently had to make the tough decision to increase the monthly rates for these services. The amount of the rate increase and the timing are indicated below.

**TDM Services will be increased by 40% effective April 2025.** The increase may not affect some Customers' rates where existing contract terms and conditions allow for increases only under specified contract conditions or contracted expiration dates.

At Brightspeed, we understand the importance of accurate billing and the trust you place in our services. Your ongoing partnership is invaluable to us, and we're dedicated to supporting your business for many years to come.
